Re is available in both iPhone and iPad versions; Ill look at the iPhone version. Then Ill discuss how Dish Networks app allows you to control that companys DVRs from an iPad. Because the IR emitter connects to the bottom of the phone, you need to turn your phone upside down to use it. If there's more than one number, you'll just have to try each of them. Setting up the Re is a bit confusing at firstnot because its upside down, but because it presents the IR database in a generic way. Most manufacturers reuse the IR codes for their devices a newer Onkyo receiver, for instance, may use the same codes as older ones, and they add codes for new functions. The Re software presents these codes in numbered lists; each number likely refers to a different family of similar products from different manufacturers. For any of your devices, youll get a set of meaningless numbers. Just pick one, and see if it works. If not, try the next. Youll encounter some odd oversights, such as Microsofts Xbox 360 game console. Nowhere does it have a listing for game consoles. The Re acts as a learning remote, so if you cant find the codes for your device and you have access to that devices remote, you can position them to face each other and go through the tedious chore of clicking buttons to transmit the remote codes to your iPhone.

The good news is that NewKinetix supports hundreds of devices, so the odds are good that yours is there. Selecting devices for an activity. Re is an activitybased remote. After you add the devices, you add activities, such as Watch a Movie or Watch TV. For each specific activity, you select from the list of devices youve added to that room. Pick the primary device for an activity. After that, you choose which device is the primary one; Re lists this page as the onscreen menu picker. Once youre done, you can go to that activity and launch it, which turns on all the devices and presents you with a fairly generic set of controls for that activity. You can swipe down to reveal more detailed controls. If you need other controls for a particular activity, you can go to the devicespecific menu. If you use that function often, the PDF manual details how you can customize these screens by adding buttons for extra functionality, including macros. Watching a DVD gives you basic playback controls. Overall, this arrangement works surprisingly well. Re isnt quite as polished as the Harmony One remote Ive been using, but if I were to spend some additional customization time, it could get pretty close. The neat thing is that if you have multiple devices in multiple rooms, you dont need more than one remotejust one iPhone or iPad. Dish Network App Most of the major contentdelivery companiescable, satellite, and onlinenow have apps for smartphones to help you manage your devices. Since I have a Dish Network ViP722k, I gave the Dish application a whirl. The grid view looks much like the Dish Guide. Youll need a DVR that has broadbandconnection capability, like the ViP722k. Thats because the Dish app doesnt use remote or even RF signals. It communicates with the DVRreally a Linuxbased computerover the Internet to deliver commands.

<http://www.bouwdata.net/evenement/boss-dr3-manual-portugues>

You might think that this setup would result in some network lag; but when I tried it, pressing the Record button seemed to result in the show recording starting almost immediately. Getting started,

though, is a little cumbersome. First you need to activate your account for Web access; you do so by going into the Dish DVR installation menu and selecting the Web access menu entry. You can scroll through the list of thumbnails, but its pretty big. Once you have Web access, you download the iPad app the company also offers one for the iPhone, and an Android version is coming. You then have full access to the Dish guide, and the app even knows what DVR you have right down to the serial number. Recording is easy. You can set up a schedule to record all episodes, just new episodes, or just the one. You have a variety of views into the Dish TV listings. I found the thumbnail view too limiting, even on the iPad, so I prefer the grid view. The thumbnail view, which is the Home screen, looks pretty crowded, but you can sort by category. Picking one show easily lets you schedule a recording. You can also do this in the grid view. You can also navigate to a page that lists all existing DVR timers. You can modify, cancel, or add new timers, as well as manage conflicts. Ive gotten fond enough of the Dish app that Im no longer using the DVR and remote control to manage recordings its that simple. For what its worth, you can also handle these tasks via a standard Web browser, at the Dish Network Website. But the iPad makes the process more organic and natural feeling. Managing your recordings is dead simple. One other cool aspect of Dish that I plan on adding in the future is Sling capability. Dish Network bought Sling a couple of years ago. The highend ViP922 DVR has Sling capability built in; alternatively, you can order a Slingbox to add the functions to an existing Dish DVR, provided that it has USB support. Ive ordered one, but I havent had time to set it up yet.

<http://heidelberg-schloss.com/images/Disc-Could-Not-Be-Read-Wii-Operations-Manual.pdf>

Adding Sling capability means being able to watch your recorded shows on the same device youre using to control the DVR namely your iPad, iPhone, or PC. One day, the IRbased remote control may fade away, leaving true wireless control of devices from any location, at any time, without the necessity of addon hardware. Right now, however, you can use your smartphone or tablet computer, if youre willing to download some apps and invest a little learning time. Read our affiliate link policy for more details. 0 out of 5 stars It has worked nearly perfectly ever since. The DVR itself seems to work fine, the only complaint I have about it is the OTA Tuner that I had purchased for it the OTA Tuner is NOT supplied with the Dish 722 model from Amazon, is an inferior product compared with the OTA Tuner that came with my Dish model 622 DVR. The OTA Tuner takes longer to tune in the local digital channels it does find them all during setup and has trouble keeping a lock on the channel as the signal comes and goes. When the local channel does come in, it shows a signal strength in the 80s and 90s depending on which channel. I am not sure whether this is due to the OTA Tuner or the

722k DVR. In any case, my review of the Dish 722k DVR is very positive and if you have a need for the OTA Tuner, please take this additional into consideration. NOTE For the Dish 722k DVR, the OTA Tuner model to use, as I recall, is the OTA2 Tuner for a Dish DVR. I bought my through Amazon a while back, but I think they are still available for purchase. My new Panasonic TV benefits from being connected to a source that has a HDMI output, which the VIP 722K has. The VIP 722K has only been connected for a few days, but what a difference in picture quality, sound and feature benefits such as automatic aspect ratio adjustment. Have not suffered some of the complaints indicated in older reviews. After connecting the DVR to your system and obtaining the satellite signal, the software will update and would assume that most glitches have been eliminated. When calling Dish to activate the receiver the representative mentioned the VIP 722K was one of Dishes most reliable receivers. Installation of the unit is straight forward, especially if you are upgrading from an older similarly configured model. After using this DVR for only a few days feel it was well worth the price to upgrade. Finally in April, the satellite was installed as we had to wait for a bit of warmer weather in interior Alaska.

About two weeks ago I kept losing the satellite signal. We rechecked everything cables, connections, clearance, angles, etc. I noted that the unit was making noises as if it were shorting out where the HDMI cable attached to the back of the receiver. So we tried another receiver a much less expensive DISH receiver, and it worked. I have contacted the seller who said to contact DISH as the receiver is still under warranty. DISH refuses to replace the unit as it was purchased from a vendor, not directly from DISH. The seller has failed to respond to further emails, so I am stuck with an inoperative receiver and paying for service that I am not receiving. In reviewing the Return Policy for the seller they say to refer to Amazon who says to refer to the sellers policy how clever, a circuitous route of babble. Obviously, Amazon hasnt been particularly helpful, either. UPDATE Seller refuses to accept responsibility stating unit still under warranty so DISH should replace. DISH technical dept wants to go thru the testing system procedure been there, done that. Accused of lying by DISH tech dept stating they had no record of my previous calls. Still have a faulty unit. Still giving DISH my money. Still have no TV. Amazon customer svc agreed to replace unit thru another seller no shipping cost, but I would first have to pay for the unit then get the reimbursement. Declined this offer. WORD OF WARNING Best be sure before ordering any big ticket items from Amazon. Am in the process of filing complaints with the BBB. After doing some research on which DISH Network DVR to get the 722, 722K, 922 or the Dish Hopper DISH Networks newest DVR, identifying some model selection pitfalls and failing to get DISH to commit to providing me with the best option the DISH 722K DVR Not the 722 DVR and definitely not the 922, I decided to purchase one through Reider Electronics to get what DISH would not commit to. I am extremely satisfied with what I received from Reider Electronics.

I sent an email to East India Trading Company requesting to return the unit and they said they would not accept the unit unless Dish network does a diagnosis. The equipment does not go on so it is not possible for Dish Network to do a diagnosis. I would like to return the unit in exchange for a new one or my money back. It has all the bells and whistles one could want from a classic DVR. It supports two TVs, comes with two remotes one of which is UHF, so you can control the receiver from a different room where TV2 is located. There is an optional addon Over The Air OTA module for adding your local broadcast channels onto it. The OTA module is often overlooked for the functionality it adds. While you probably already receive your locals over the satellite feed, if you are watching a local channel it counts as one of your two simultaneous feeds you can be using with this receiver. If you have the OTA module, you can not only have two simultaneous feeds over the satellite signal, but also 2 simultaneous overtheair feeds. That means you can be recording up to 4 things at once 2 shows via satellite, 2 shows via OTA. DOWNLOAD as many books as you like Personal use. CANCEL the membership at ANY TIME if not satisfied.
