We take no responsibility for the validity of the information available in each manual nor do we have any affiliation with the brands nor their products. Digital cameras Panasonic. We have included samples for the lowest and highest ISO settings for each camera 80 and 400. Most importantly it is obvious that the Leica 12x optic is considerably sharper than the Kodak lens, and the FZ20 is capturing a huge amount of detail edge to edge. Noise is fairly high as it is in many 5MP cameras, though given that you dont really need to sharpen much it is certainly not a serious issue at ISO 80, and even at 100% these images look sharp, and relatively clean. Click here Our Panasonic Lumix DMC-FZ20 review has been in much demand, with enthusiastic After repeated requests Panasonic DMC-FZ20 combines a 12x optically stabilized zoom lens with a 5 megapixel Leica heritage, the Panasonic FZ20's long zoom shows very good optical quality. Read on for all the DMC-FZ15 model we reviewed previously. If you've read that review, you probably Exposure Bracketing. AC adapter. It is a larger bodied camera than the Panasonic DMC-FZ5 and is suited to the more serious photographer due to its hotshoe for external flash units and manual focusing options. Movie Feature The Panasonic Lumix DMC-FZ20 allows you to record movie clips at either 10 or 30 frames per second, limited in length only by the capacity of the memory card used. Click here. The DC Vario-Elmarit lens combines a comfortably small size with superb image rendering, and the Venus Engine LSI ensures that you will capture rich, expressive images. Furthermore, the MEGA Optical Image Stabilizer offsets unintentional hand movement to give you clear, sharp images even when taking handheld telephoto shots or shooting at night. It stores images on Secure Digital SD or MultiMediaCards MMC which combine high storage capacity, rapid data transfer, and flexibility all in a card about the size of a postage stamp. A Motion Image Recording mode with Audio records moving images with audio at a resolution of 320 x 240 pixels with no limit on segment length save for the available card capacity. The camera includes a full complement of Photo Editing Software ArcSoft PhotoBase, ArcSoft PhotoImpression, ArcSoft Panorama Maker and SD Viewer for DSC. It comprises 13 lenses in eight groups, including three aspherical lenses and boasts F2.8 brightness across the entire zoom range.

Plus, the DMC-FZ20 also provides 4x digital zooming combine that with the 12x optical zoom to get up to 48x zoom power for ultralongdistance telephoto shots. Superb Quality Leica Lens The Leica DC Vario-Elmarit lens on the DMC-FZ20 follows in the Leica tradition of excellence. Although it is small in size, it has a large, bright aperture, meeting Leica's stringent quality standards. A Leica multicoating process applied to the lens helps to prevent the fogging caused by flare, and ghosts that can result from excessive light. Even enlarged images captured by the DMC-FZ20K are crisp and clear right to the edges. Venus Engine II LSI Thanks to the highperformance Venus Engine II LSI, shutter release time lag is reduced to approximately 0.008 seconds and the shutter interval to only around 0.4 seconds. This gives the DMC-FZ20 a superfast response that lets you snap off consecutive shots at 3 frames per second with full resolution. And the Unlimited Consecutive Shooting function allows unlimited consecutive shooting up to the capacity of the SD Memory Card in the camera ideal for capturing fastmoving objects in high resolution. MEGA Optical Image Stabilizer Offsets unintentional hand movement while you're taking pictures to give you clear, sharp images even when taking handheld telephoto shots or shooting at night. This optical technology provides precise compensation for movement with no image quality degradation. Manual and Advanced Functions In addition to the variety of convenient automatic controls, the DMC-FZ20 has full manual controls for exposure, focusing, and white balance. Manual exposure capability gives you complete freedom for capturing images according to your preferences, including intentional overexposure or underexposure. The manual focus ring provided on the lens barrel, like traditional camera lenses, allows you to focus on the particular part of your subject according to your preference.

Finally, advanced histogram functions provide a graphic representation of the luminance level of the pixels composing an image for more precise exposure control for quality photos. Intelligent Multiple Metering Mode Provides incredible exposures by helping to improve brightness, color temperature and focus information. It also helps to determine the best exposure setting in difficult shooting situations such as when there is intrusive backlighting. Motion Image Recording with Audio Using the QuickTime Motion JPEG format, the Lumix DMC-FZ20 can record moving images with audio at a resolution of 320 x 240 pixels. The maximum time for each recorded segment varies depending solely on the available SD card capacity. Bundled Photo Editing Software The photo editing software included with the Lumix DMC-FZ20 camera lets you turn your home computer into a virtual photo studio SD Viewer for DSC Makes it easy to check image data on an SD Memory Card. Use it to create slide shows and save them on an SD Memory Card Windows ArcSoft PhotoBase Transfer images from an SD Memory Card to a PC and display them in a list ArcSoft PhotoImpression Adjust colors and process images to create calendars, cards, etc. ArcSoft Panorama Maker Merge separate photos to create a single image Print Directly From Your Camera You can send images directly to print, without the need of a PC, when using PictBridge compatible printers. It's a Lumix Digital camera and it stores still and movie images on SD or MMC memory cards. Here's a rare feature Jitter from shaky hands is one of the main reasons why cameras produce blurry images. We don't expect everyone to have hands of stone when taking pictures that's why Lumix cameras help solve the problem of unsteady hands with advanced MEGA Optical Image Stabilizer technology. The DMC-FZ20 has a built-in gyro sensor that detects any hand movement and relays a signal to a tiny microcomputer inside the camera, which instantly calculates the compensation needed. A linear motor then shifts the Optical Image Stabilizer lens as necessary to guide incoming light from the image straight to the CCD. You won't even notice it working all you'll see are the outstanding results. It's time to get a Lumix and smile. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Megan McGuire 3.0 out of 5 stars I have been using it for many years, it is both a great camera and very reliable. I estimate that I have taken over 20,000 shots with this camera since purchased. It is great in almost any situation. Works perfectly outdoors and in bright situations. It could be better in lowlight situations, however there seems to be very few digital cameras that do work well in low light, except the ones with a very large sensor. Works great for scenery and fast moving shots outdoors, such as capturing athletes in motion.

I have been considering upgrading to the Panasonic DMC-FZ30 or DMC-FZ50, but I do not think there is any compelling reason to do so. In fact, after reading the multitude of reviews on my model and the other two, I think the DMC-FZ20 may actually take better pictures with less noise because of the Venus II processor introducing less noise than the Venus III version. So I recently bought a hotshoe mounted flash and I am sticking with this winner for a while longer. Coincidentally, I purchased a three-year service plan with the camera, but have never needed it. This camera offers outstanding value for the money. Not intuitive. OK pictures but nothing to rave about. Shutter reasonably fast.

Camera died in 1.5 years and was considered unrepairable by service center and Panasonic was completely unmoved. Avoid this camera. Many better choices for the money. Many features of this site may not work correctly. You'll never miss THAT MOMENT again. Perfect for unpredictable moments. In addition, continuous focus stability is enhanced when shooting video. The Level Shot Function detects the horizon line and maintains it, even if the camera is tilted. Plus, its touch control allows you to quickly set focus just by touching the subject on the screen. View the image, set the focus, or release the shutter from a distance, and then transfer images for sharing on social media. Should you find any errors, please help us by reporting it here. " Shoot open landscapes, zoom in on a room interior, or pull a distant object right up close all with instant zooming ease. With the FZ20, you get the same capabilities as a single lens reflex camera equipped with a full set of interchangeable lenses. Use it to explore a new level of photographic expressivity. For example, use normal magnification for most ordinary shots, medium telephoto for portraits, and super telephoto for special longrange shots. The FZ20 even gives you the same capabilities as a super telephoto lens in the 400mm, F2.

8 class something every serious photographer should have. Remarkably, the FZ20 offers the kind of specifications you get with a big, heavy lens, but in an extremely compact, lightweight package. With most compact zoom lenses, the brightness tends to be lower in the telephoto range. Not the FZ20. Its 12x optical zoom lens delivers F2.8 brightness all the way to full telephoto. This gives you more expressivity and greater ease of use because the exposure value doesn't change even when you zoom out to shoot longrange telephoto shots. The Elmarit lens made by Leica Camera AG of Germany has earned the acclaim of top photographers everywhere. Now some of the same cutting edge technologies that make this lens so exceptional have been adapted to the digital camera. Presenting the LEICA DC VARIOELMARIT lens that inherits the traits that make Leica a legend in the camera world. Small in size yet featuring a large, bright aperture, this lens meets Leica's stringent quality standards. In fact, the FZ20 goes a step further by using ED extra low dispersion glass in its lens, which helps minimize the refraction differences among light of different wavelengths. This helps to suppress the color bleeding that often occurs in telephoto shots, giving you crisp, vivid images no matter how far you've zoomed in on your subject. The CCDs used in most digital cameras have much smaller light receiving areas than film does, so photos tend to have a high depth of field. This means that everything in the photo including objects in the foreground and background is in focus. The

FZ20, however, takes advantage of its 12x zoom and large F2.8 aperture to offer the kind of expressivity you cannot get with conventional digital cameras. You can snap photos that capture the subject in a clear, sharp focus while giving the background a beautiful soft focus. Use the 4x digital zoom together with the 12x optical zoom and you've got ultrapowerful 48x zooming. That approximates a huge 1728mm lens on a 35mm camera.
