## Book Descriptions:

# Dodge Magnum Srt8 Manual Transmission For Sale

The donor vehicle used for this Magnum will be a 2012 Dodge Challenger SRT8 with 31,000 miles on her. This vehicle will look vastly different after all of the upgrades she will be getting. It is a 2012 Challenger with 31k miles. We will be taking the driveline and rear suspension out of this Challenger and using it for the Magnum. Other items from this vehicle will also be used as needed. We will be getting ready to fab the manual trans tunnel into this, as well as replace the 6.1 auto wiring with the 6.4 manual wiring needed. So we cut the full tunnel and some extra to fab into the Magnum shell. This will be the tunnel used in the Magnum to house the TR6060 transmission. You can see a side by side difference with the shift plates from both manual and automatic tunnels. You will also see the two items being custom fitted together to properly fit back into the Magnum and accommodate the manual transmission. You can see the shifter base being tested in the tunnel to make sure everything lines up properly. The suspension has a 3.92 Getrag differential. She will also get a nice set of BC coilovers to make the ride extra special. This time she was fit with a Procharger Super Charger. We also painted the Hellcat Brembo calipers a custom orange mix. Lots of time and effort go into making a body harness to support the functions of the parts involved in the build. We also got the suspensions in and the brakes on. With the majority of the wiring in the cabin buttoned up, it is time to get the 08 Magnum interior in and with the underhood finished, it was time to get the 08 front end on the car. This kit was for a 6.4L, which of course did not come in the Magnum. Once the Procharger kit was complete and the suspension was dialed in, it was time to take the Magnum to get fine tuned and aligned. The wheel power and torque were just shy of 530. This is on low boost and a safe tune. There is certainly room for more power! What a blast to drive!<http://cnokorea.com/userfiles/case-4210-service-manual.xml>

So many small details Here are some behind the. We may earn a commission through links on our site. It was a cool car, but never came with a supercharger or a manual transmission. One shop solved both of those problems with this particular Magnum. The best part Its for sale on eBay Motors right now for a pretty reasonable price. The 392 cubicinch Hemi and TR6060 sixspeed manual transmission were sourced from a 2012 Challenger SRT donor car. Attached to the engine is a P1SC1 Procharger making seven psi of boost. On a dyno, the car made 529 horsepower and 528 lbft of torque to the wheels. The car rides on adjustable BC Racing coilovers and OEM Charger Hellcat wheels painted in a lovely shade of bronze, wrapped in Nitto NT555 tires. They shroud Hellcatsourced Brembo brakes painted in orange. The car is an 06, though the shop grafted on a fascia from a later version of the Magnum from 2008. Theyve also deleted the rear wiper and badging for a cleaner look, and tinted the windows. According to the ads description, theyve put on 1000 breakin miles to ensure everything works as it should. Thats nearly double what any other SRT Magnum would cost, but considering all of the upgrades, we can understand why the shop would ask this much. It really does check all the boxes, after all. Thanks Allen motors He was really helpful and did the best Followed up and offered to keep in touch. Thanks Not high pressure sales. The vehicle was parked in front ready for us to look at and to test drive. It was exceptionally clean inside and out. The sales staff was courteous. We were pleased with our visit and subsequent vehicle purchase. They responded well to our needs and hopefully help out in the future. Although I purchased a Ford F150 from another dealership it was because of the trim package alone that wasn't available. Wasted 8 hours of driving I recommend Honda of Slidell to anyone looking to purchase a vehicle! I don't do business with people that can't provide simple information that allows you to make an informed decision. The vehicle is S but was advertised as SQ4. Too bad you can't give negative stars Built on a Plymouth Barracuda platform, it was two inches longer than the Cuda and had a wider and longer hood than the Mustang. If you notice similarities to the Charger, that's because the same guy, Carl Cameron, designed both cars. After several changes in engine offerings and trim names, this generation of Challenger lasted only until 1974, due to low popularity, but was reintroduced as a fourcylinder coupe along the lines of Honda Prelude or Toyota Celica in the late 1970s. The big news for 2008 is Dodge's Challenger Concept Car. Inspired by the success of Ford's return to a somewhat classic look for its Mustang, Dodge is releasing a retro style Challenger in 2008 that is much anticipated by muscle car fans everywhere. The Ford Mustang and Chevrolet Camaro have both eschewed their "retro" phases to become moI wasn't born in the sixties or seventies, and so I didn't pack any buddies in the back to chase girls and do burnouts when gas was 25 cents a galFastforward to 8 years later, and it's still the Saw it at the dealership and worked out a deal with them. See all 8 photos The TREMEC Magnum will not bolt in to a Chrysler LX car as it comes in the box from TREMEC, so McCord put his Ivy League engineering degree to good use and designed a solution to get the shifter to come up through the same location the automatic shifter used. Using CAD drawings of the transmission and the tunnel of the Charger, he was able to move the shifter mechanism to the correct location. A few prototypes later, he found a solution that gave both the factory correct shifter position as well as the desired performance. The new shifter is shorter and crisper than the factory TREMEC Magnum shifter and is isolated from the vibrations of the drivetrain. See all 8 photos With the transmission design complete, the rest of the kit was par for the course for McCord. He quickly had the rest of the mechanical parts in place. A newly programmed ECM engine control module was installed and the car was back under its own power. After a few test drives and design improvements, McCord buttoned the Charger back up and the project was complete. See all 8 photos While we were not the first to transform one of these cars to have a manual transmission, we are the first to make it a turnkey solution utilizing a brand new TREMEC Magnum 6speed for anyone who would like to do this conversion. Every bolt is included, every step along the way documented in a fully illustrated installation manual, and every part we provide is manufactured to our exact and high standards. Peace of mind comes standard in the form of a 36month warranty only available through Silver Sport Transmissions. Each kit is complete and will work on all LX models with a V8 and rear wheel drive. The kit will not work on V6 models or models with allwheel drive. See all 8 photos With the transmission installed, the 07 Charger was completely transformed and is a complete thrill to drive now.

Without the automatic, you can row through the gears and push the HEMI V8 to its limits or choose to drive more conservatively; it's completely up to you and the fun factor is off the charts. From the 2005 to the 2008 model years, the nameplate was revived for a station wagon on the rearwheel drive Chrysler LX platform, produced in Canada and sold on the American and Canadian market. Styling features included four rectangular headlights behind retractable clear covers, with narrow opera windows, and an optional Tbar or power sunroof. The Magnum was well featured with power steering, brakes and seats; the suspension included Chryslers standard adjustable, longitudinal torsion bars, lower trailing links, and front and rear antisway bars. The base engine was the 318 cu in 5.2 L V8 with LeanBurn, while two and four barrel carbureted 360 cu in 5.9 L and 400 cu in 6.6 L V8s were optional; weight was nearly 3,900 lb 1,800 kg. During the start of the 1979 model year, the 400 V8 engine was dropped from the options list as Chrysler stopped producing bigblock V8 engines in production cars during the end of 1978 model year. Technology was advanced for the time with an onboard spark control computer from inception, electronic ignition, and a lockup torque converter. Only 3,704 1979 Dodge Magnum coupes included a TTop. Chrysler worked on several car designs to smooth out the current 1975 bodied Charger into something that would be reasonably aerodynamic for the big racetracks and the Magnum design was settled on in the summer of 1977 for use in the 1978 racing season.

At first it seemed that out on the tracks the cars ran well with Petty almost winning his Daytona 125 finishing second, and leading over 30 laps of the Daytona 500 until a blown front tire caused him to wreck. However, the lack of factory development support of the smallblock Chrysler 360 V8 as a race engine was becoming more of a problem, and in high speed racing traffic the Magnum did not handle well. From August 1978, two to five independent teams showed up with Magnums in NASCAR races, until January 1981, when NASCAR switched to smaller bodied cars. The Magnum never enjoyed the racing heritage of its predecessors, but it was not without its own achievements. Petty

scored 7 top five finishes in his 17 races with the car, and Bonnett won three poles and scored 5 top five finishes with his. Petty recognized the Magnum with a commemorative decal, depicting his famous number 43 emblazoned on a Magnum for his 1992 Fan Appreciation Tour. Though Petty never won a race in a Magnum, his son, Kyle Petty drove one of his fathers yearold Dodge Magnums in his first race 1979 Daytona ARCA 200, and won. Kyle raced in five NASCAR races using the leftover Magnums in 1979, but wrecked them beyond reasonable repair by the 1980 Daytona 125. As of December 2012, only two NASCAR Magnums still existed; one an exPetty car resides in the Talladega NASCAR museum, and the other; Marty Robbins 1978 Magnum No. 42 has been restored and is owned by a private party in southern California. They were built with minor changes from the original model, starting in 1969, and were all largely based on the 1968 Dart GT and GTS. For its last three years of production, a twodoor upper trim level version of the Dart was sold as the Magnum, featuring the 318 in. V8 engine used in all Dodge coupe and sedan models in Brazil.

A unique fiberglass front fascia that included four headlights to give it a more modern look was used, while the rear end was very similar to the American Dart 1975 the Dart model from the same year having been identical to the Swinger from USA. The Magnum top of the line was sold as a separate model from the Dart bottom line, despite being technically almost identical to the Dart. Today one can find car clubs with many Dodge coupes in good condition. These were very similar to the American Plymouth Gran Fury in appearance and trim, but had Chryslers Rallye wheels instead of deluxe wheel covers. Chrysler de Mexico used a small platform and the Magnum name, equipping it with 360 CID 5.9L V8 engine rated at 300 hp 224 kW, with a Carter ThermoQuad four barrel fourchoke carburetor, Mopar oil cooler, a 3speed A727 automatic transmission A833 4speed manual optional, heavyduty suspension, power brakes, stabilizer bars in the front and rear and a Dana 44 differential with positive pass and positraction. All the windows and windshield chromed metals were painted flat black; only the bumpers and the grille were chromed. For the 1987 season, the turbocharger received an intercooler and the power from the turbo engine changed from 140 to 150 hp 112 kW. The Kcar based Magnum was replaced by the Mexican Chrysler Shadow GTS for the 1989 model year. The Magnum had four engine options; the SE features the 190 hp 2.72 L LH V6, the SXT had the 250 hp 190 kW 3.5 L V6, and the RT had the new 340 hp 5.7 L Hemi V8. The SRT8 has a 425 hp 6.1 L Hemi engine. Allwheel drive became an option in 2005 on SXT and RT models. The SRT8, AWD SXT, and the RT use a MercedesBenz derived 5speed automatic transmission, while all other models use a fourspeed automatic. Like the 300C SRT8, it featured the new 6.1 L 370 cu in Hemi engine, which produces 425 hp 317 kW. 20inch wheels, firmer suspension, bigger brakes Brembo, new lowerbody treatment, and a revised front and rear fascia completes the transformation.

The SRT8 was named Best New Modern Muscle Car in the 2006 Canadian Car of the Year contest. It was essentially the same as the U.S. market Magnum, but with the Chrysler 300Cs front end and interior, and righthanddrive for Australia and the U.K. The 300C Touring added an available 3.0 L CRD Turbo Diesel version. The 300C Touring was assembled in Austria. The front fascia sported new aggressively squared off headlights and a smaller rectangular grille more reminiscent of the Charger. The SRT8 variant gained a new hood scoop. A new bright red paint scheme was introduced. Production ended on March 28, 2008. By using this site, you agree to the Terms of Use and Privacy Policy. All rights reserved. In 2007, Dodge showed the facelifted version of it. The most important change on the outside is the front side of the vehicle, where it received a more aggressive look. There were a lot of differences between the Dodge Charger and the Magnum. The inside quality materials were different and Dodge. The concept that previewed the car was unveiled at the Los Angeles show. The first ever Dodge Magnum was produced in 1978, and the nameplate made a return in the mid 2000s. The model released in 2004 was offered with three V8 engine options, developing up to 430 hp and mated with a 5speed aut.
