I cant even find that on the 16 inch model. I cant possibly be the only person concerned about airborne sawdust. Other woodworking forums devote a lot of time and space to controlling this subject. Am I missing something here But been having alittle trouble trying to get depth on the rim of the cut out. Left the front of the rim larger then the rear, tried a bevel cut on the rear rim. Still not happy with the out come. Nothing better then finding your own answer. Semper Fi Oohrah One of the features was a wheel sander on the side. I noticed on the newer models that the sander was not included or mentioned. Is that option discontinued Thanks. Chris Then I broke my back and damaged my sciatic nerve and wasnt able to use the Stylus until after 3 surgeries on the back and carpal tunnel release. When the new wheel was on this morning, the lock was very hard to slide and the Stylus wouldnt turn on. I also noticed the green light on the charger blinks for 20 or 30 seconds and then goes off if it comes on at all. My package didnt have an instruction manual. I dont know if the battery is drained or damaged or the charger is not working. I would appreciate any advice. Sleepless I sent a request to the customer relations department here and hope that they can help me. If they cant, could someone here please make a copy of any literature that they have for it I am even willing to rent on till the end of Sept, 08, and pay for the shipping. I have a big Art show coming up and cannot finish my work without the station. If you are willing to only rent the station I will need to know how much you would charge daily, before I send a payment. You might say I am also a staving artist, looking to correct that position by selling at my one person show in Santa Fe, New Mexico. I would be so grateful if someone out there could help me out. However, recently the saw went nutters on me the motor will spin faster than usual.

So after taking out the control board to have a look, I realised the transformer on the control board has fried. I invested a few bucks and ordered some key parts that I figured might need replacing. I plan to do the same with my scroll saw. I had Dremel send me a replacement part and now Im trying to figure out the easiest way to put it in the saw. Does anyone have suggestions as to the best route to take to get the job done. Any suggestions would be appreciated. Thanks, RMN Thanks so much!
