Drill Doctor 300 Manual

Turn the chuck knob clockwise until it is tight. B Now, loosen the chuck knob slightly, turning counterclockwise, just until the drill bit begins to slide through the chuck jaws. C Press the pusher button in and insert the chucked drill bit into the alignment tube. Take care to match the flats on the chuck with the flats on the top and bottom of the tube. Your bit is ready to sharpen. Gently push the drill bit forward until it meets the drill stop, which is visible through the alignment viewer. With a direct, easy pressure, turn the chuck clockwise, white mark to white mark and repeat. Remember you are grinding steel. A small bit requires a light pressure and may only take a couple of turns to sharpen. A large bit will need greater pressure and will take additional turns or more to sharpen. Make sure the chuck follows the steel cam post. Avoid putting downward pressure on the chuck. Keep the pressure even, and directed into the tube. The correct sharpening action will naturally rock the chuck back and forth. This motion should not be prevented. More sharpening may be required for very dull or broken bits. Lastmanuals provides you a fast and easy access to the user manual DRILL DOCTOR 300. We hope that this DRILL DOCTOR 300 user guide will be useful to you. Cutting Edge Heel. Cause. Dirty Chuck. Look through the Window and make sure the Bit Clamps grasp the bit at the narrowest point when you release the Alignment Button. Tighten the Chuck Knob, but Correct before sharpening small bits, look through the back of the Chuck to be sure all Chuck Jaws are straight against the drill bit. If the Jaws appear to be out of line, move the Chuck Knob slightly to the left just until the Incorrect Jaws straightendo not loosen the Chuck Knob or the bit will loosen and the alignment will be lost. Now, sharpen the bit in the usual manner. Aligning and Sharpening Masonry Drill BitsRemember, you are only sharpening the carbide insert. Why was my drill bit sharpened improperly Answer. The most common cause of improper sharpening is improper drill bit alignment. Too many rotations of a small diameter bit results in incorrect sharpening, and too few on a large bit may not sharpen enough. The drill point must be against the Drill Stop and the Bit Clamps must be at the narrowest part of the drill bit. To correct, apply light, not firm inward pressure and rotate the Chuck smoothly while sharpening. Question. Why is the chisel edge on my drill bit flat During the alignment process the Bit Clamps were gripping the high points of the drill bit. Realign the drill bit making sure that the Bit Clamps are located in the narrowest section of the bit. Question. Why are my small drill bits not cutting The product has not been dismantled and no service or repairs have been attempted other than those suggested by a Drill Doctor TSR. An alternative to installing a new wheel is to reverse the existing one. I.e., remove the current wheel, turn it end over end, and reinstall. The drill bits I sharpened did not wear out the middle of the wheel, so reversing it provided new wheel life. Once its been reversed, and its worn again, a new wheel is required. If you're having trouble getting the old diamond wheel off the spindle, here's a tip told to me by Drill Doctor.

Put the Drill Doctor in the freezer for 30 minutes and then, try again while the unit is still cold. This may sound silly, but it worked for me. The cold shrinks the metal parts just enough for the old wheel to slide right off. The new stone once again makes bits as sharp, or sharper than new. The rate of collection may vary from time to time and by location and by type of tender used for payment so check at your local Canadian Tire gas bar.

You can also collect eCTM on purchases that you make at other merchants that are charged to a Program Credit Card. In addition, you may collect eCTM at a different rate if you pay with a Program Credit Card than you would if you use a Triangle Rewards Card or Cardless Method. Purchases made in a foreign currency with a Program Credit Card are first converted into Canadian currency as set out in the cardmember agreement prior to calculating the amount of eCTM that you have collected. If you use a Triangle Rewards Card or Cardless Method, it must be swiped or scanned or your phone number provided, as the case may be, before you make your purchase. You cannot use a Triangle Rewards Card or Cardless Method together with a Program Credit Card. If you charge a purchase to a Program Credit Card, you will only earn eCTM at the applicable Program Credit Card rate then in effect, even if you also present your Triangle Rewards Card or Cardless Method. However, if you redeem eCTM to pay for part of a transaction and pay for the balance of the transaction with a Program Credit Card that is linked to a different Triangle Rewards Account than the account from which the redemption is occurring, all eCTM collected in respect of that transaction will be credited to the Triangle Rewards Account from which redemption is occurring.

You will not be able to collect eCTM on that portion of a transaction in respect of which you redeemed eCTM. However, we may, from time to time and at our discretion, have special offers or promotions that would allow you to collect eCTM on that portion of a transaction in respect of which you redeemed eCTM. If you use more than one Program Credit Card to make a purchase e.g. split the cost between two or more cards, all eCTM collected on that purchase will be credited only to the Triangle Rewards Account linked to the first Program Credit Card that is presented. If you make payment using a Program Credit Card in combination with some other form of tender, only that portion of the purchase charged to the Program Credit Card will earn eCTM at the then applicable Program Credit Card rate. That portion of the purchases made with the other form of tender may be eligible to earn eCTM at a different rate. Delays may occur in recording eCTM to a Triangle Rewards
