Change Serial Number If the serial number activation times exceeded, please click here to change another serial number for activation. Chapter 4 Restore a UEFIBased Computer 4.1 Introduction to UEFI UEFI is short for Unified Extensible Firmware Interface. It s an advanced standard compared to legacy BIOS, such as it supports bootable GPT hard drive, larger capacity more than 2T, etc. Since UEFIbased computers have bootable information written in their motherboards, you must set related hard drive information into the target computer after cloning. However, traditional BIOSbased computers don t need such step you only need plug a cloned hard drive into a target computer and it should be immediately usable. You can make use of Windows Disk Management tool to check if your computer is UEFI. This tool the screenshot below is available in every Windows. Please refer to your computer manual for details. Then choose an UEFIbased hard drive in the dropdown menu to make it bootable, click Next to complete the steps. DriveClone makes an exact copy of disk drives, including all types and all sizes of hard drives, solid state drivesSSD, hybrid drives, RAID drives, and UEFI systems. DriveClone will resize partitions automatically when clone to different size drive. The cloned drive is immediately bootable.No hiccups; this program made the transition a breeze. And dont assume that it can clone every partition! Choose the RAW partition on drive 2 as the destination.If you are not carefully read the partitions names like me, you will end up loosing the whole Data D partition on drive 1. You will then have 2 System partitions on the same drive.I was lured to use DriveClone from Farstone by some advertisement as Im upgrading my laptop SSD upgrade Based on my experience, May 19, 2015 Id recommend. My PC and time are bizcritical, so didnt dork around with the free version, just bought it, used it, now can get back to generating revenue. Cant uninstall normally. Leaves a permanent nag screen at boot time. I had to delete by hand and edit the registry. Evil. Unacceptable method of trying to get you to pay. Evil. None of them worked. Wasted several hours. The next day I saw this one. Decided to try it. My OS drive was cloned within an hour. It simply does the job. I just pray nothing worse than the popup happens. Also it can not be uninstalled as it does not show up under programs or any uninstaller I have tried. Not even under task manager. FarStone definitely flags this software area as its own territory Click here to review our site terms of use. Once reported, our staff will be notified and the comment will be reviewed. Learn more.Hardware can fail, and its a pain losing your data. There are also times where youd like to swap out a hard drive — whether in a laptop or a desktop — for something faster, but you want your PC to be the same as it was before the

swap. In either of these cases, Macrium Reflect is a solid program that easily clones a drive.

Why Macrium Its the first one we used, it works, and we didnt find any reason to switch to another. You can purchase a hard drive enclosure and hook your PC up to the new internal drive for a direct clone before replacing it — this method will take the least time. If you dont want to go in for a hard drive enclosure, you can clone the original drive to an external drive, do the physical swap, boot Windows from the external drive, and clone back onto the new internal drive.If youre in the market for a new internal drive but unsure of where to start, check out our SSD buyers guide. The first step is to get Macrium Reflect installed on your PC. I went with the default settings. Some are paid, some are free, but they all do pretty much the same thing. Its UI is super simple to use, and you can even set an automatic file sync that will keep your backup up to date. It supports a ton of file systems and it plain works. Just dont expect a fancy user interface. Its also good practice to clean up any files on your system, especially if youre moving to a smaller drive — you cant have more data than the new drive can hold. In this case, Im choosing my C drive because it is the drive Im swapping out. A blue rectangle will appear when the disk is selected. Remember, this process will erase any data stored on the destination drive. Ensure they are in the same order on the external destination drive as they are on the original drive. In my case, Im cloning to a drive the same size as the old one, so I dont need to change anything. If youre moving to a smaller or larger drive, follow these instructions to resize partitions before proceeding with steps seven to ten.This is a good time to ensure the drive letters are all correct. If youre moving to a smaller hard drive, you want to ensure your data fits. The first thing you want to do is clean up your original drive so that it has less data than the new drive can hold.

If youre moving to a larger hard drive, you want to expand the primary partition so that it takes up the entirety of the new disk. Insert the following steps in between step 6 and step 7 in the preceding instructions. Change this value so that the partition grows or shrinks depending on whether youre moving to a smaller or larger drive. Make sure your PC is turned off before going through these steps. Launch it and follow the same steps to clone your external drive to the new internal drive. Tell us about your experience in the comments. Learn more.Heres all we know about it so far. Heres why they should. This is why weve rounded up the best picks from AMD and Intel to help you get started. May 18, 2020Maybe youre migrating your Windows installation to a new drive, or perhaps you want a complete onetoone copy in case anything goes wrong. In those cases, your best bet is to clone your hard drive, creating an exact copy you can swap in and boot up right away. Some backup services, like IDrive and Acronis, have builtin diskcloning features, supplementing to the normal file backup. Well be using some free tools designed specifically for drive cloning in this guide, though. If you want a true backup solution with supplemental cloning features, check out one of the paid options. But for oneoff clones like if youre migrating your OS to a new drive, these tools will be all you need. If you have a desktop computer and both drives are installed internally or youre just cloning to a USB external drive for backup, great. Youre ready to continue. If, however, youre using a laptop with only one drive bay, youll need an external SATAtoUSB adapter, dock, or enclosure to connect your bare drive to the computer. Once youve connected your drive, you can go through the cloning process, then disconnect it and install the drive internally. In most cases, your destination drive will probably need to be as large as, or larger than, your source drive.

If it isnt, youll need to free up space on your source drive and shrink the main partition down to fit. Youll probably only need to do this if youre migrating from a hard drive to a smaller SSD; we have a separate guide on that process here. Its free, easy to use, and widely loved by many, so its hard to go wrong. To install Macrium Reflect, download the Home Use installer and start it up. Its just a tiny tool that will download the actual installer for you, based on the type of license you want. Choose the temporary folder for these files—I just put them in my Downloads folder—and click the Download button. Once its finished, itll automatically launch the Macrium installation wizard, which you can click right on through—the default options should be fine for our purposes. You can safely delete all the installer files from your Downloads folder once the wizard has finished. You have two main options you can directly clone one disk to another, or create an image of a disk. Cloning allows you to boot from the second disk, which is great for migrating from one drive to another. Imaging, on the other hand, allows you to store as many full, onetoone copies of your source disk as the destinations space will allow, which is useful for backups.Note that this will erase all data on the disk, so be careful which one you choose.Ive skipped this, since Im just doing a onetime clone. On the page after that, you can also save the backup and its schedule as an XML file for safe keeping, but Ive unchecked that option for the same reason—Im only doing this once for now. This can take some time depending on the size of your drive, so give it time to do its thing. If you cloned your drive, you should be able to boot from it now by selecting it in your BIOS. If youre imaging your drive, you can actually keep the second drive connected for future image backups. Its free, simple to use, and has been around for years.

In the second menu, select the destination disk youre cloning to—this will fully erase the drive in that second menu, so make sure there isnt anything important on it. The process will begin. Yeah, its that easy. If you want to replace your Macs internal drive with the new drive say, if youre migrating to a larger drive, you can open up your Mac and swap those now, then boot up as normal. If you want to boot your cloned drive from USB, you can hold the Option key as your Mac starts up and select it from the boot list. Your cloned drive will be in the exact state your computer was during the cloning process, and you can continue working without skipping a beat. He eats potato chips with chopsticks so he doesnt get grease on his mechanical keyboard.Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology. The display of thirdparty trademarks and trade names on this site does not necessarily indicate any affiliation or the endorsement of PCMag. If you click an affiliate link and buy a product or service, we may be paid a fee by that merchant. It can backup whole applications, including their settings and with just one click you can clone your whole drive, regardless of size. Apart from the several backup tools and features it has, extra functions are included for various purposes, like a defragmentation tool and automatic partition resizing. If you have a serial key, you will be prompted to enter it in one of the

steps along with the User Name and Company Name. Otherwise leave that box empty and continue normally. It is compatible with 32 and 64bit edition systems too. At the main screen of the program, you have two choices Clone Drive and Clone Partition. Their differences are obvious; from the first option you can copy the contents of one disk to another, whilst from the second option you can copy one partition to another.

After choosing what kind of cloning you want to do, you can continue the cloning procedure by following the instructions in the next screen. This feature of DriveClone is probably its strongest point, and depending on your objective you can use different tools. For example you can update or migrate to a new PC or Server, or migrate HDD to SSD. Oneclick migration is supported as well. Cloning a disk includes not files and folders, but Windows, applications and their settings. The cloned Windows drive is bootable right from the beginning, without requiring you to make any special settings. Cloning is also supported for RAID systems. It completes every task without problems and relatively fast. We found no bugs during our tests, and we are quite sure that the program will not cause you any problems. Like DriveClone, it can clone hard disks or partitions, including installed software and operating systems. It also has a feature called SafeGuard, which is perfect for saving data from corrupt drives. For Mac users, Carbon Copy Cloner is a very good choice with many features. FarStone definitely flags this software area as its own territory, so DriveClone's competitors will have a hard time competing with it.Be the first to review this software. Antivirus information. The application allows you to easily clone the entire content of your hard drive or SSD storage device, such as files, applications, partitions settings, Facebook favorites, Windows folder, and much more. The cloned drive can be stored in a safe location for backup purposes. You can use it on other machines, as well. DriveClone offers support for a broad range of of SSD storage devices, including Toshiba, Lenovo, OCZ, Kingston, SanDisk, Samsung, Seagate, Western Digital, Intel, and many others. DriveClone will not clone your temporary files or Windows files. In addition, the application is capable of performing defragmentation during data migration. This feature ensure enhanced speed and performance.
