professional recording studios around the world. With the latest advancements in dbx's proprietary AutoEQ and AFS algorithms, a new input delay module for delaying the FOH system to the backline, Ethernet control via an Android, iOS, Mac, or Windows device, and updated Wizards, the DriveRack PA2 continues the DriveRack legacy of great sounding, powerful, and affordable loudspeaker management processors, for a whole new generation. Para calcular la calificación general por estrellas y el desglose porcentual por estrellas, no usamos un promedio simple. Nuestro sistema toma en cuenta cosas como lo reciente que es una calificación y si el revisor compró el producto en Amazon. También analiza las calificaciones para verificar su fiabilidad. Vuelva a intentarlo en otro momento. I could start by saying that if you do not understand Equalization, Crossovers, Compressors, and Limiters you should not buy this product. I could say that, but I won't because with the built-in Wizards, you could get away with knowing very little about these things, and still get great results. I would strongly recommend, however, adding the RTAM reference mike to your purchase, unless you have something else equivalent. There are several Wizard programs, that will take you through setting up the DriveRack to recognize your system, set volume levels, auto EQ etc. Even pros should appreciate these apps as they pave the way to a great starting point in ringing out your system, and your venue.

While Pink and White noise generation is available, the Wizards use frequency sweeps to tune the system, speaker by speaker, and point by point in the room. The feedback control is quite nice. With 12 filters that can be divided into Fixed for room characteristics and Active to handle performance characteristics this system keeps feedback on a very short leash. Getting the best out of your sound system is achievable as the DriveRack has 6 XLR outs for stereo High, Mid, and Low speaker systems OR you can run a single chain for a simple mono system. The RTA Wizard takes your configuration and figures out where you should place the reference mike for it to analyze your system. The Automatic Feedback System AFS is used after you have set up a rough mix with all mikes in place. This clever little wizard listens to the system as you raise your mixer faders. You can hear the feedback begin, and then get squelched as the AFS kicks in. Pros will appreciate the ability to control pretty much anything from the Display contrast, to the Crossover frequencies on each speaker array. The only thing I can think of to complain about is the size of the display, but even I think this is unfair because, let's face it, it is a 1U sized device. There is not a lot of real estate to work with. There is also a Laptop application that will allow access to the device via a router, which makes the controls much easier to manipulate. In summary, you get a lot of bang for the buck. The automatic feedback suppression alone is worth its weight in gold. We hold company meetings for 600 people in a giant metal box with a concrete floor. Amplified sound in there is not good; with tons of reflection and echoes. Before the DBX, we tried a wireless lav microphone once and temporarily deafened the first 6 rows of the audience when it fed back. That experiment was not repeated for an entire year. Our equipment then got upgraded with 4x the power.

Wireless mics were out of the question unless I could find a solution. This DBX box is that solution. We typically run 2 or 3 wireless lavs simultaneously now where one was impossible before. I have had a presenter get within 20 feet of a loudspeaker without any issues; where 50 feet used to be squealing. The amp and loudspeaker equalization is just icing on the cake. Being able to set up everything with an iPad 75 feet from the rack rocks too. I have some homemade PA speakers nice ones and some I bought, and I finally bought a TPLINK 300 so I could set up the internet. I had to use my iPhone and set the TPLink as a client on my computer. I connected both the TPLink to my phone and the device via cable and installed the app, and it found it automatically. From there I was finally having fun. Before that, it was a lot of head scratching. Love this thing. Makes my other speakers sound way better, and my new speakers, sound perfect. Has a limiter to save you from blowing a speaker. I am using stage mics nice ones to set this up. Anyways, I am not a pro DJ, I just do this for fun if you can call it that. It really takes my set up to the next level. Makes my setup sound

like it should and takes all the guess work out. I bought my refurbished on here via Amazon Prime. I buy most of my stuff used, or build it rebuild stuff. But I am sure most people could not tell. I learned about these devices from another pro in the business, and I had to find the right one form my setup, and it took me a year to save the money. I really love it. I really do. Analog equipment just works over and over, and my laptop just gets virus after virus. After slowly adopting some digital equipment and seeing it work over the long term, I decided to try the PA2 processor. All I can say is holy cow. It does everything that a rack full of analog EQs, comps, delays, and crossovers would do ten years ago.

That alone makes it amazing, but add the wireless option, and now I can tune monitors from stage, I can walk the hall with my phone and tune. Cool stuff, and I know this review is about five years late for the engineers who have been fully digital with BEhinger and Midas board for a few years. But here is the lowdown. It works. as specified, with great sound, and easy set up for those who have less system tuning experience. It works, enough said. A router and iPad to fully utilise its potential. Its little complicated at first but easy to understand as you get on it. Never have used a drive rack before and when I saw this. I had to buy one beacuse of the app feature in it. The work through application mode helps you a lot. I was struggling at first bcoz I never had used a dbx before. When I knew how to handle it. wow this made me smile. And I said yes this is what I have been dreaming about. More settings but easy process. My system sounds different then yesterday I could hear the differences. Its too easy and best solution for a system. I would recommend any one to have it and feel the differences yourself. Go on and have one I swear you wont regret after having it. Me gustaria que tuviera un apagador aunque sea en la parte trasera, porque no tiene apagador. Solo algunas veces me ha pasado que se queda trabado al cambiar la configuracion y debo apagarlo y volver a encenderlo. Aun cuando esta en red fisicamente conectado, muchas veces la aplicacion no encuentra el driverack PA2 hasta que no se enciende y apaga de nuevo. Tiene todo lo necesario para lograr que todo suene perfecto. sin reverberaciones ni saturaciones de frecuencias. Optativo Se necesita un microfono para la medicion del sonido para hacerlo automaticamente Para salir de este carrusel, utiliza la tecla de acceso directo del encabezado para desplazarte al encabezado siguiente o anterior. De todos modos, podra editar su pregunta o publicacion. Now with complete control from your mobile device. The Drive Rack PA2 provides all

the processing you need between your mixer and amplifiers to optimize and protect your loudspeakers.

With the latest advancements in dbxs proprietary Auto EQ and AFS algorithms, a new input delay module for delaying the FOH system to the backline, Ethernet control via an Android, iOS, Mac, or Windows device, and updated Wizards, the Drive Rack PA2 continues the Drive Rack legacy of great sounding, powerful, and affordable loudspeaker management processors, for a whole new generation. Para calcular la calificación general por estrellas y el desglose porcentual por estrellas, no usamos un promedio simple. Nuestro sistema toma en cuenta cosas como lo reciente que es una calificación y si el revisor compro el producto en Amazon. También analiza las calificaciones para verificar su fiabilidad. The main reason for the upgrade, other than saving 2U of rack space and ten pounds of weight by getting rid of the AFS224s, was to gain wireless iPad control over the feedback elimination function during sound checks, and more convenience overall when tuning the crossovers, managing presets, etc. For tuning, I invoke everything except the Automatic Feedback Suppression AFS manually, and do my loudspeaker measurement using a thirdparty FFTbased analyzer. So for me, the iPad apps crossover tuning pages got a strong workout, and I love the app. I've owned over a dozen analog multiway crossovers over the years, and a couple of digital ones, including the original DriveRack PA, and I've been designing and building high performance multiway PA rigs since the 1980s. So now for the possibly bad news. I run my FOH system in stereo, and one of the two units drives both channels in a stereo configuration. No problem there, the PA2 is doing everything I want it to. However, at a typical gig I run two mono monitor mixes, plus two stereo IEM mixes. One of the mono mixes is for sidefills, and one for floor wedges. So the second PA2 I purchased is set up in dualmono mode, and is processing the sidefill and wedge mixes.

This second application, which is inherently a dual mono situation, is where the PA2 falls down. Although you can set it up with Dual Mono GEQ, this ONLY applies to the GEQ, and not, as far as I can tell, anything else. The crossovers are not independent. This limitation I was aware of and doesn't matter to me; that's a feature that DBX has always held back for the more expensive DriveRack models. Worse, the AFS doesn't appear to be dualmono, either, so the main thing I'd been planning to use this for remotecontrolled AFS for my monitor mixes is pretty crippled. If you have independent monitor mixes going to individual monitor speakers placed at different distances to the mics, the feedback modes are going to occur at different frequencies. It isn't the end of the world, but it is unnecessarily damaging to the two mixes sound quality to apply a greatest common denominator of the required filter notches to both of them. This is a step backwards from my outboard AFS224 units, which are truly dualmono if you want them to be. It can be confusing to remember what's what when you're using the PA2 iPad app, but it does work. My overall conclusion is that PA2 is extremely useful when used within its intended applications.
