Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Driverack Px Manual Pdf . To get started finding Driverack Px Manual Pdf , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

Driverack Px Manual Pdf

Everything you need bundled into one simple, tidy, portable package. Well, you may think your powered speaker system is complete, but you're missing half the picture. DriveRack PX is the other half. In another dbx industry first, we've created a processor specifically tailored for powered speakers. Utilizing our highly acclaimed DriveRack technology, the PX picks up where your powered speakers leave off. The DriveRack PX Powered Speaker Optimizer has everything you need to get the most out of your stereo powered speaker system. It even includes stereo or mono subwoofer support. With the included dbx M2 measurement mic, AutoEQ corrects for audible deficiencies in the room environment. Your ears, your audience, and your powered speakers will forever thank you. Our exclusive Setup, AutoEQ, and AFS Wizards, and outofthebox support for a host of JBL and other popular powered speakers, make setup a snap. Louder, cleaner, better sound than you thought possible from your powered speakers. XLR RTA Mic input. Everything you need bundled into one simple, tidy, portable package. In another dbx industry first, they've created a processor specifically tailored for powered speakers. I am a mobile dj and my current setup is 2 x Mackie SRM450 speakers, Traktor Kontrol S4 controller and a laptop. I also have a Samson subwoofer but have only used it once as the Mackies have always been adequate at the venues I play at. However, 3 years ago I purchased the driverack px after extensive research to add to my set up mainly to achieve sound clarity. Having read a number of posts on this forum I have been confused how best to setup the unit i.e. follow the instructions in the manual or those on the forum. As such, I have never been able to use the unit. Following the instructions in the manual has never been practical because there are always people at the venues decorating etc when I arrive. I have read somewhere on here that I can setup the unit indoors or outdoors, store the results and then manually adjust to suit when I arrive at the venues. Now to do this, I have the following questions 1. The suggestion is to auto eq the speakers one at a time but should I have both speakers connected initially when I carryout the first part of the setup i.e. where I select my speaker model etc 2. Having performed step 1 above, should I select MONO in order to auto eq the speakers one at a time or STEREO 3. When I have tried the auto eq with one speaker connected, the unit keeps asking me to adjust the volume of the second speaker which is not connected. Any idea why 4. Finally, how would I use the Para Eq to achieve a flat result. Can this be clarify in lay mans term please. Apologies if I appear to be asking silly questions but I paid good money for this unit and would like to get some use out of it. I have tried desperately not to post a message but make use of the information on the forum.

<http://www.diamondsinthemaking.com/content/e521-dell-manual>

However, each time I read a post I get more and more confused about what I am suppose to do. Hence why I decided to join and post this message. Any help will be really appreciated. Thank you in

advance. I have read somewhere on here that I can setup the unit indoors or outdoors, store the results and then manually adjust to suit when I arrive at the venues. Now to do this, I have the following questions But this isnt rocket science, and weve come up with a pretty foolproof way to get the most out of your system. I just ran a test on my PX, havent used it for a while and what I did was the setup first, I used the first speaker that came up in the presets. I dont NEED no stinkin presets. It was the JBL EON G2, but again, you dont need a preset for powered speakers, or unpowered fullrange speakers. Then I stored the preset in the PX. The center boost, there are 8 bands boosted right. Ill give this a try. If you want to get involved, click one of these buttons! Powered by Vanilla Forums. The DriveRack PA from dbx Professional Products represents a complete integration of the key elements that help ensure optimal loudspeaker system management in PA specific applications. Comenten y suscribansen Facebook. Encontra Procesador De Audio Dbx Driverack Pa Plus Manual Espanol Audio Profesional y DJ en Mercado Libre Argentina. Descubri la mejor forma de comprar online. Consultancies Mottles Dbx driverack pa2 owners manual pdf download. Courtyards Unlatched Assured Romanticism. Now theres the DriveRack PA2, which is still in the affordable price bracket, but comes with an extended and more userfriendly feature set, including network and WiFi control capabilities for iOS, Mac, Android, and Windowsbased devices. All that it does, it does at a system level; in other words it processes the main signal going to your rig or monitors and not individual elements within the mix, although you could use it on any insert point like any other piece of outboard kit. Lets take a quick look at some of the main processor stages within the PA2, before getting on with how to drive it. Theres not anywhere near enough room here to cover all the functions and features on offer, but if this review interests you, you can learn more about it by downloading the manual — and the wireless control app — from the Dbx web site. The crossover frequencies, filter types and slopes can all be adjusted, and the output levels of each band can be set relative to each other to suit the amps and speakers that it is feeding, using the frontpanel controls and nice clear graphics on the small LCD screen. The available filter types are Butterworth and LinkwitzRiley, which have different crossover characteristics for example a Linkwitz Riley will commonly be chosen for crossovers as the upper and lower signals are attenuated by 6dB at the crossover point, which results in unity magnitude, ie. The user manual has some useful information on setting up crossovers, and goes some way to explaining the audible difference between the two filter types. Its easy to set up the crossover filters manually, and what I like most about this function is the live LCD display, which shows the crossover curves changing as you adjust the parameters, which is a great way of understanding what is going on.

The ratio is fixed at infinity to one, and there is an allowed transient overshoot of 3dB, so the output will deliver signals 3dB above your limiter threshold setting for very short periods — so if you really need to prevent any signal peaks, however brief, from exceeding a particular level then youd set the threshold 3dB below this. The limiter circuit is not, as far as Im aware, a brick wall limiter like the PeakStopPlus design found in the higherend DriveRack models, and you cant alter the overshoot margin, but its useful protection against accidentally overdriving your system, so long as you bear in mind that the PA2 has no control over anything connected after it, so it cant protect your speakers against inappropriate amplifier settings. Applying postcrossover limiting has the advantage that, as the different frequency bands are unlikely to reach the limiter threshold at the same time, part of the output signal will remain uncompressed by the limiter meaning that the sound wont all be squashed flat just because one band has reached the limiter threshold, so the gain reduction applied will tend to sound more natural and retain some of the programme dynamics. Compression of a whole live mix needs to be approached carefully, but it does have its place, and is a useful tool for evening out recorded tracks and making the material sound subjectively louder. Again, the Overeasy setting controls the onset of compression, with higher preset numbers introducing a softer knee curve to give a less noticeable effect. There are five EQ stages available in total, four of which are eightband parametric types, with the fifth being a 31band graphic EQ. One of the parametric stages is applied to the input signal, and is initially set by the AutoEQ Wizard though the eight bands can also be manually adjusted if needed.

The other parametric EQs operate on the outputs one per output, and are automatically set if the

preset speaker tunings are applied using the Setup Wizard — but these, again, can be adjusted afterwards as necessary, and have, in any case, to be manually set if there is no appropriate preset tuning for the speakers being used. The graphic EQ is available as a fully manual stage on the PA2s input side, and contains 31 frequency bands from 20Hz to 20kHz, the gains for which can be adjusted in 1dB steps. Six preset curves are provided as starting points, including one called flat, which does what it says and is handy for cancelling everything out and starting over. The graphic EQ can be used to finetune the sound, if necessary, after having run the input side parametric EQ in auto mode. There are 12 filters on tap, and each can operate in two ways — either as a fixed filter that, once set, remains in place until manually cleared, or as a dynamic filter, which is applied when feedback is detected during a live performance and has the option to automatically release after a predetermined time. Three filter widths are available per filter, from very narrow for music programme material to a wider speech setting, which acts faster and is more aggressive in terms of what it removes from the overall content. The new feedback detection algorithm in the PA2 is claimed to be faster than in the old model, and it is also adaptive and will automatically widen the notch filter if a second feedback frequency is detected very close to another, thereby using one filter to take care of two problem frequencies, and leaving the other filters ready for deployment. When I tried it out it certainly worked quickly and smoothly, and on running it a second and third time with the same mic setup it picked up the same frequencies in the same order each time. I did try to trick it into assigning a filter on a keyboard note, but the algorithm worked as it should and my sustained note wasn't removed!

The postcrossover alignment will normally be included within preset speaker tunings, and the input delay is definitely one process that benefits from the wireless app, as it can be adjusted remotely when listening to the system from the middle of the audience area. Without getting into all the detail of this, the good news is that input adjustments can be directly entered in distance feet or meters or time units milliseconds, so you can simply measure the distance that you want to compensate for and dial it in. Whatever is coming out of the system speakers is picked up by a flat response measurement mic connected to the RTA input, and a 31 band level versus frequency analysis is displayed on the screen and can be useful for investigating audible problems such as speaker polarity issues or for tuning the whole system manually. If the Setup Wizards help is required you don't have to rub a lamp or incant anything, you simply press the big red illuminated button labelled Wizard and all the magic is there at your command. Running through the Wizard routines is simple, and the step by step instructions and information displayed on the screen is clear and unambiguous, and in my view definitely better than the old DriveRack PA. There is also a Wizard Options feature, which allows lower level preferences to be chosen within the scope of the Wizards. The most tempting choice is run all Wizards, which goes through the lot in the optimum order to set up all possible automated system parameters. The data wheel acts as an enter or confirm button, and all the text is easy to read even when it's highlighted. The screen has a decent angle of view, but is best read from directly in front. I crossed my fingers and cut power to the unit whilst it was still connected to my monitors, and there was no pop or noise of any kind — a big improvement over the original.

Then, of course, there's the facility to access the functions via the wireless iOS app; with a router connected to the PA2, the remote control app answers one of the problems I've always had with the DriveRack units, and that's where to locate it. As a crossover and limiter it really needs to be in the amp rack or at least near the speaker system to avoid running multiple pairs of cables, but as a compressor or a feedback suppressor I'd prefer to control it from the mix position. Now the excellent app solves this, as the PA2 can be physically located to suit the cabling, and remotely controlled from wherever you like. It's a one box solution to most everyday live sound system setup issues, and can offer precise control via simple, automated routines or by detailed manual operation. It's hard to see how it could fail to offer some advantage, and its convenience and price make it worthy of serious consideration even for just one or two of its functions, let alone all the other clever stuff

inside. Pros Single, neat unit with a host of functionality. Very easy to use, especially with the Wizard functions. Allows a good level of manual control over individual processing. Remote control app allows operation from anywhere in the venue and has a great user interface. Cons At this price, nothing springs to mind. Mastering Essentials Part 1 6 days 10 hours ago. For this example, we ll use JBL PRX s and JBL PRX s, but you can use almost any powered speakers and powered subwoofers with the DriveRack PX. If you re using the DriveRack PX for the first time, begin on page. If you ve already set up and saved a preset for your powered speakers, and just want to optimize your powered speakers for a new room or venue, begin on page. Rack mount the DriveRack PX and connnect the power cord. SUB OU PU S GND X U 66 EC 6 V 6H Manu actu ed unde he ol owing U S atents Attach power cord here.Turn on the mixer. Make sure the controls on your powered speakers are set the same on both speakers. For example, if you re using subs, and they have a polarity setting, make sure they re both set to the same polarity. Turn the level control knobs on your powered speakers all the way down. Turn on your powered speakers and subwoofers now. Now let s create a preset to match your powered speakers. This preset is based on JBL PRX s and JBL PRX s for illustration purposes. Press and hold the button until System Setup appears in the display. Turn the Data Wheel until pink noise is playing through your speakers at performance level the same volume you intend to use during your performance. The words SET TO PERFORMANCE LEVEL will appear in the display when you have passed the minimum threshold.
