- **dsc installer manual pc5010, dsc programming manual pc5010, dsc installer manual pc5010.**

If the Ready light is OFF, check to see that all doors and windows are closed and that motion is stopped in areas covered by motion detectors. The system Cannot be armed unless the Ready light is ON indicating that all zones are closed and the system is in the Ready state. As each digit is entered, the keypad sounder will beep. If the access code was entered incorrectly, the keypad buzzer will sound steadily for two seconds. If the correct access code is entered, the keypad sounder will beep quickly and the Armed light will come ON. At the end of the exit delay period, the Ready light will turn OFF and the system will be armed. The exit delay time can be changed by your installer. To secure the system, close all doors and windows and cease all motion in areas covered by motion detectors. The panel will provide an exit delay period, also indicated by keypad beeps, for you to exit the premises without causing an alarm. If motion is detected in the interior zones, or if one of the perimeter zones is violated, the alarm sequence will begin. The system will recognize that occupants have left the premises. Once the exit delay expires, the system will be fully armed. Your installer will tell you if the Audible Exit Fault has been enabled on your system. If you reactivate the interior zones, be sure to only inhabit areas not covered by motion detectors. The Armed light will flash as a reminder that the system is armed and has no entry delay. An entry through any zone programmed as a delay zone will create an instant alarm. Your installer will inform you if the Quick Arm feature has been enabled on your system. Once the door is closed, the panel will end the two minute quick exit delay. If the door is opened again, or if the door is not closed after two minutes, or if another zone is opened, the panel will begin the entry delay. Your installer will inform you if the Quick Exit feature has been enabled on your system. If an error is made entering the code, enter your code

again. <http://marinapogon.pl/cubase-le-6-instruction-manual.xml>

As soon as the correct code is entered, the Armed light will go out and the keypad will stop beeping. The correct access code must be entered before the entry delay period expires. If a valid User code is not entered during this time, the system will go into alarm. The entry delay time may be changed by your installer. After the 30 second period, the Memory light and zone light will stop flashing and the panel will return to the Ready state. Please note that troubles will not display while the system is in the Alarm Memory Display mode. Use the arrow keys to view which zones caused the alarm. Use the arrow keys to view which troubles are affecting the system. Zones which are temporarily out of service due to damaged wiring or contacts may be bypassed to allow system arming until repairs can be made. Bypassed zones will not cause an alarm. Zones cannot be bypassed once the system is armed. Bypassed zones are automatically cancelled each time the system is disarmed and must be reapplied before the next arming. Bypassing zones reduces your security protection. If you are bypassing a zone due to damaged wiring or contacts, please call a service technician immediately so that the problem can be resolved and your system returned to proper working order. Do not unintentionally bypass zones when you arm your system. As each zone is bypassed, the corresponding zone light will turn ON. If a zone is bypassed by mistake, press that zone number again and the zone light will turn OFF, indicating that the zone is not bypassed. When the system is armed, the Bypass light will be ON if one or more zones are bypassed. To unbypass a zone, enter the zone number; the "B" will disappear from the display to show that the zone is no longer bypassed. The open zone will be represented by "O". If you bypass the open zone, the "O" will be replaced by a "B". The doors and windows which will provide this indication are programmed by your installer.

When the command is entered, the keypad buzzer will beep 3 times if the door chime feature is enabled and will sound one long beep if it is disabled. After the 30 second period, the Memory light and zone light will stop flashing and the panel will return to the Ready state. When a valid user code is entered, the keypad will stop beeping. Use the arrow keys to view which zones caused the alarm. Use the arrow keys to view which troubles are affecting the system. The Master Code must be four digits unless otherwise indicated by your installer. Enter digits 0 through 9 only. The code number is a double digit from 01 to 32. User codes must be four digits unless otherwise indicated by your installer. Enter digits 0 through 9 only. Be sure to record your new codes. Enter digits 0 through 9 only. If there is no "P" then that code is deleted. For more information regarding access code attributes, please contact your installer. If these keys are in service and the installer has enabled audible feedback, holding down the key for two seconds will cause the keypad sounder to beep indicating that the input has been accepted and transmission is underway. The transmission of the alarm to the central station is delayed for 30 seconds. If the alarm is not cleared within the 30 second delay, it will then be transmitted to the central station. If the alarm is silenced and the smoke detector is not reset, the alarm will resound after 90 seconds. If there is no smoke, the system will return to normal. Scroll to find Ask your installer for more information regarding your system's operation. Begin with the panel in the Ready state. Should the system fail to function properly, call your installation company immediately for service. The bell and keypad buzzer will sound for two seconds and all keypad lights will turn ON. The zone light will turn OFF when the system restores to normal i.e. door or window closed. This message will disappear when the zone is restored.

<http://eco-region31.ru/el-manual-conversion>

Should the system fail to function properly, contact your installer. If one of these trouble conditions occurs, the keypad will beep twice every 10 seconds until you press any key on the keypad. If you cannot determine the cause of the trouble condition, contact your installer for assistance. One or more zone lights will turn ON, indicating the various trouble conditions. When this trouble occurs, the Trouble or System light will turn ON but keypad buzzer will not sound. The following will occur: To set the system time, following the instructions in "Setting Date and Time" Alarm memory will

automatically display each time the system is disarmed. As you type, results will change. Since the company's genesis, the experts at DSC have been leading the way. From our revolutionary control panels, to our industry-leading IP alarm monitoring products and now to our sleek, contemporary self-contained wireless panels, DSC has always been front and center in the security space.
