CAUTION To reduce the risk of electrical shock, do not removeWelcome to the team of FEEDBACK DESTROYER PRO users and thank you very much for expressing yourWith the FEEDBACK DESTROYER PRO you have purchased a highly useful device for the control of sound. When feedback has been detected andTake care to set levels properly on the FEEDBACK DESTROYER PRO. Low levels deteriorate the dynamics. Before applying the FEEDBACK DESTROYER PRO, it is therefore advisable to remove the condition causingAnalog Inputs. Type RF filtered, servo balanced input. No user serviceable parts inside; refer servicing to qualified personnel. WARNING To reduce the risk of fire or electrical shock, do not expose this appliance to rain or moisture. E This symbol, wherever it appears, alerts This symbol, wherever it appears, alerts you to the presence of uninsulated you to important operating and mainte dangerous voltage inside the enclosure nance instructionsIt is one of my most pleasant tasks to write this letter to you, because it is the culmination of many months of E hard work delivered by our engineering team to reach a very ambitious goal making an outstanding device better still. The FEEDBACK DESTROYER has for some time been a standard tool used by numerous studios The fully featured FEEDBACK DESTROYER PRO not only suppresses feedback but also incorporates a wealth of additional functions in one single unit. Its 24 separate filters can be edited in all parameters and automatically detect and suppress feedback frequencies. With its prolevel iFor further information on correct installation see chapter 5 Installation.

As a standard the audio inputs and outputs on the BEHRINGER FEEDBACK DESTROYER PRO are fully balanced. If possible, connect the unit to other devices in a balanced configuration to allow for maximum interference immunity. The automatic servo function detects unbalanced connections and compensates the level difference automati cally 6 dB cWhen all filters are set the oldest automatic

filter starts flashing, indicating that it will be the next filter to handle new feedback. Parametric filters are also indicated by a nonflashing LED. In Single Shot mode the filter will not release a setting which has been achieved until you manually change it. This is particularly useful with problems at dWhile this dot is on, you can select a program though its settings will not take immediaBefore you connect Each filter has the functionality of a fully parametric EQ, i.e. you can seAfter loading the data, the FEEDBACK DESTROYER PRO enables the preset and the dot disappears. This brief interruption avoids the direct activation of every preset, as you scroll through the preset list with the jog wheel. Additionally, you can rotate the jog wheel at high speed and still have the timBasically, all parameter changes in Parametric EQ mode can be saved. Filters working in SingleShot or Auto mode will adjust and store the required parameters automatically. Example s You recall a program for editing. Then you edit the preset as desired using the function keys and the jog wheel. During this process, the flashing STORE key reminds you that the preset settings have been changed but not saved yet. Press the STORE key oLow levels deteriorate the dynamics of the music signal, which results in a poor, weak and noisy sound. On the other hand, excess levels overdriving the converters in the FEEDBACK DESTROYER PRO should also be avoided. Digital distortion is unlike its analog counterpart very unpleasant to hear as it does not occur gradually but abruptly.

Use the input level meter of the FEEDBACK DESTROYER PRO to adjust the input sUse the FEEDBACK DESTROYER PRO in the monitor path and in single channels with critical signals. If there is no other way to eliminate feedback, you can insert the FEEDBACK DESTROYER PRO into the main mix bus. Unless your mixing console has dedicated insert points for the main mix bus, you can simply connect the Depending on the amount of attenuation applied, the use of only one filter may lead to slight distortion, which produces interference in the signal path. This is a natural physical phenomenon which sThis enormous range of values is difficult to handle and additionally does not represent the subjective perception of sound, since human hearing tends to use a logarithmic curve. When an increase in loudness by the factor two is perceived as one step, four times the loudness level equals two steps. So, the decibel is a unit of measurement that describes a level in relation to a reference. Then switch on the FEEDBACK DESTROYER PRO and keep the two keys pressed for about one second. After loading the data, the FEEDBACK DESTROYER PRO enables the preset and the dot disappears. Basically, all parameter changes in Parametric EQ mode can be saved. Filters working in SingleShot or Auto mode will adjust and store the required parameters automatically. Before applying the FEEDBACK DESTROYER PRO, it is therefore advisable to remove the condition causing the feedback problems. For example, try different microphone positions. Subsequently, you can fine tune the frequency of your choice. 4. 5 Digital audio processing In order to convert an analog signal e.g. music into a series of digital words, a socalled Analogue to Digital Converter. You are currently using an outdated browser. To optimise your browsing experience, please update your browser.

Destroyer Pro DSP1100P. Remember that you can also share the solution. If you solved the problem yourself, please write the solution to the problem with Behringer Feedback Destroyer Pro DSP1100P you will surely help many users by doing so.Ask a question our users can help you. The second mode is best for handling mobile mics. In manual mode, it becomes a fully parametric EQ with 24 filters, and in the studio the freeware Windows editor can be used to control all filters in real time, placing a superb MIDI filter bank at your disposal.

24bit internal processing and professional 46kHz sampling rate, servobalanced inputs and outputs with XLR and jack connectors, an internal power supply, complete MIDI implementation, and a futureproof updatable software architecture " all make this a fully professionalquality unit. The second mode is best for handling mobile mics.All Rights Reserved. Publisher does not accept liability for incorrect spelling, printing errors including prices, incorrect manufacturers specifications or changes, or grammatical inaccuracies in any product included in the Musicians Friend catalog or website. Prices subject to change without notice. Please check your inbox, and if you can't find it, check your spam folder to make sure it didnt end up there. Please also check your spam folder. No user serviceable parts inside; refer servicing to qualified personnel. Read the manual. For example, the appliance should not be situated on a bed, sofa rug, or similar surface that may block the ventilation openings, or placed in a builtin installation, such as a bookcase or cabinet that may impede the flow of air through the ventilation openings. All other servicing should be referred to qualified service personnel. It also meant a lot But it was fun, too. Developing a product usually brings a lot In return, we guarantee you uncompromising quality manufactured under Many satisfied customers means large sales volumes Isn't it only fair to pass this benefit back The fully featured FEEDBACK DESTROYER PRO not only suppresses feedback but also incorporates a wealth of additional functions in one single unit. Its 24 separate filters can be edited in all parameters and automatically detect and suppress feedback frequencies.

With its prolevel internal signal processing circuitry, the unit can The MIDI interface allows for integrating E the FEEDBACK DESTROYER PRO into any MIDI system, and the open system architecture enables you to In short the BEHRINGER FEEDBACK DESTROYER PRO was built for the next millennium. After reading the manual carefully, make sure it is always on hand for future reference. All parameter edits are performed with the jog wheel rotary control. 10 presets are available to store userdefined programs. Two 24bit DSPs are used as the heart of the FEEDBACK DESTROYER PRO. These perform the precise calculations needed for the processing of the complex algorithms. Additionally, the FEEDBACK DESTROYER PRO uses high quality resistors and capacitors with very tight tolerances, highgrade switches, lownoise operational amplifiers type 4580 as well other selected components. These subminiature components known from aerospace technology allow for an extreme packing density, improving the unit's reliability even further. Additionally, the unit is manufactured in compliance with a ISO9000 certified management system. Nevertheless, we recommend that you carefully examine the packaging and its contents for any signs of physical damage, which may have occurred in transit. Shipping claims must be made by the consignee. It meets all of the international safety certification requirements. Please make sure that all units have a proper ground connection. During installation and operation the user must have sufficient electrical contact to earth. If possible, connect the unit to other devices in a balanced configuration to allow for maximum interference immunity. The data communication is isolated from ground by opto couplers. If you promise to read the whole manual tomorrow, or at least next week, we show you how to get up and go and get through this night alive. If you've used a variety of PA gear, you'll have the FEEDBACK DESTROYER PRO up and running after quickly perusing the manual.

If you're not so experienced, don't worry, it will come to you. In both cases, still read the manual. The following may then help you get it happening with a minimum of fuss. Be aware that there are some actions on stage may still result in feedback. The unit should be placed between your console and the poweramplifiers. Choose Program 8 or 10 for stereo processing of the master output. When Bypass is flashing, the whole unit is bypassed. But in the other two modes, filters set to Auto or Single Shot will still operate. When all filters are set the oldest automatic filter starts flashing, indicating that it will be the next filter to handle new feedback. Parametric filters are also indicated by a nonflashing LED. This is particularly useful with problems at discrete frequencies like turntable resonances and fixed microphone and monitor positions. If feedback is detected the filter will deal with that frequency and the status of that filter will change to Locked LO. It will only widen its bandwidth or increase the attenuation but it will not In Auto mode the oldest filter will be released to destroy a new E feedback. Each of the 24 filters has one LED assigned to it, which informs you about the status of the filter. By means of an 8stage LED meter each of the two fully independent channels can be monitored. If the FEEDBACK DESTROYER PRO is set to Total Bypass mode, the level meter displays the input level. A bright LED announces that a filter has been set. Cyclically flashing LEDs idicate filters that are searching in SingleShot and Auto mode. For example, if you raise the level of a filter, the "dB" indicator lights up.Turn the wheel clockwise to increase the values, or counterclockwise to reduce them. While this dot is on, you can select a program though its settings will not take immediate effect. When the jog wheel has not been touched for one second, the LED in the display disappears and the program is loaded.

In addition you can edit the threshold of feedback suppression 3 to 9 dB by pressing the FILTER MODE and the GAIN key together for about 1 seconds. If you wish to process the left and right audio channels simultaneously COUPLE mode, press both ENGINE keys together. In couple mode both engine LEDs light up. Whenever you edit one of the two audio channels and then switch to couple mode, the parameters of the active channel will be copied to the other; i.e. if you press ENGINE L before ENGINE R, left will be copied to right. If you wish to process the left and right channels simultaneously Couple mode, press both Engine keys at the same time. The FEEDBACK DESTROYER PRO splits up the adjustable frequency range 20Hz to 20 kHz into the 31 standard ISO values of a graphic EQ see 6.1. A cyclically flashing LED will indicate this TotalBypass mode. One further pressing reactivates all filters. The LED flickers when relevant MIDI data is received. Ten presets are available on the FEEDBACK DESTROYER PRO. Subscribe to our free newsletter Request a new review UTILIZATION See General Appreciation. SOUND QUALITY See General Appreciation. OVERALL OPINION The Feedback Destroyer Behringer DSP 1100 is the weapon of the dreaded feedback. Value for money without parallel anywhere in the market. 1 of 4 people found this review helpful Did you find this review helpful yes no. The scanning is slow and cons of inefficase larsens fast. On many applications the filter attenuates not know why the entire frequency range. Leaving you a muffled sound. On the front you remember, but on a return circuit.,.,.!!!!! This unit is incomparable with Sabin.By using our services, you agree to our use of cookies. Find out more. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser.

In the REW manual, it says that it can generate filters for the Behringer DSP1124P, which is the successor of the DSP1100P. Regarding the DSP1100P, the REW manual writes Note that the Behringer DSP1100 software package does NOT correctly reproduce the way the bandwidth control actually operates, its bandwidths are too small by a factor of sqrt2 What does that means.Thank you very much for anyone who can help. This site is a destination for AV enthusiasts to share experiences, opinions, and ideas with others, eschewing egotistical debate, with an end goal of helping each other design and tweak systems to reach this "nirvanic" state. We're proud to promote an environment that allows for discourse benefiting everyone newcomers to the experienced and owners of all levels of gear affordable to the highend while encouraging open and friendly

conversation. We hope you'll join us in our goal of building a strong community of likeminded enthusiast who have chosen to post with civility and in the spirit of uplifting others.Care to buy us a cup of coffee or two. Wed really appreciate it. Check out our extra benefits for supporting members. Premium Memberships. To start viewing messages,Why Because Ive been recording for the last 4 years and have basically forgotten how to use my live set up. Yes Im an idiot! On that note I have a feedback destroyer pro the older discontinued DSP1100P and I cant seem to remember how to use it. I used to just set it and forget it on one of the presets and had some success doing that but I cant remember which I used. Again, yes Im an idiot. Heres how Im running it its only processing one vocal mic. I run my condenser into a preamp, the preamp into a Comp16 compressor, and the compressor into channel A of the feedback destroyer, and then into the board. For purposes of rehearsal, thats it. Live I will be splitting the signal so that feedback suppression is only affecting the monitors, but thats another story.

So my question is which preset do I want to use to set and forget. Will I need to edit that preset to tweak it. If so,that scares me. Also, another side question I have is that even though my mic is preamped and running through a compressor before it gets to the feedback destroyer, it seems that the only way to get a good level on the DSP1100 right at 6 to 3db is to set the operating switch on the back to 10dbV. Does that seem right.In auto mode the filters will grab and let go of the frequencies as needed. There is also a fixed mode that lets you assign frequencies and use them as a parametric EQ. You can adjust each of the filters individually in any preset. For live use Auto mode works the best. As for your other quetion Yes the 10dbv setting is correct.User Alert System provided by Super PM System provided by. All Rights Reserved. Something went wrong. Did not help. We still had feedback. Cancel Thanks, well look into this. All Rights Reserved. User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. Note Condenser Also note that the DSP1124 is an upgraded version of the 1100 with the differences being So, again, keep. In some filter combinations, you may notice a weird processor hum or low tone. This Then, return to the memory channel you were working with and see if the tone is gone. The saved program should now be tone free. If you create a program that you like, and you want to make a backup, here is a nice Once you have set up your Left channel program, press and. Now, if you ever. Version 2 is an updated version of version For a graphical representation of your EQ curve, version 1 is still a better version. There are also cables available that have a DB15 Female connector added for a Joystick passthrough if you play games that require the The software is very useful, even if you only want to use it to display a graphical image of your programmed EQ curve. Just plug in your Also, the software will let you see how your Frequency.

Get yourself a 31band EQ if your having problems with feedback. Keep it around for those times when you have to have it, but I wouldnt bother adding it to any rack as a permanent fixture. Sabine, and Shure. There may be others that work, but those are 2 Ive had good experience with.In other words it is just used as a parametric EQ. I would not use it in your A rig but it might be ok for a speakers on sticks gig. Baron To rethink the flow and the rhythm, the tumbling out of the words, is a betrayal, and its a sin, Martin, its a sin. Hank from the Naked Lunch We turn on the feedback detection and when we hear feedback, see which frequency needs turned down. It also helps teach you what feedback tone matches what frequency. I like it because its transparent in the sound and only gives visual cues, allowing you to fix it. Just check it out online. This one is in good overall shape. Main wear is minor rack wear and some finish tarnish on the bottom minimal tarnish to the front. It is one of my most. Once your stage is perfectly set up and carefully equalized, keep it free from feedback with the FEEDBACK DESTROYER PRO DSP1124P. Actually we have 4 rooms and 4 feedback destroyer install on it and we are using for a video conferencing. 12 Nov 2013. Anatomy Of A Pro Audio Sound System Part 2 Duration 936.
