Do you think it is cheaper to repair it or should I just get a new one The owners manual can be downloaded at The YouTube tutorial is at with a 12 string, you can often tune the octave until the tuner sees the matching note. It wont see the correct string number, but an A note is an A note, whether or not its an octave higher. Hope that this helps. These ratchet the base frequency up and down. In the upper left corner of the display you will see what A is currently tuned to in tiny characters. Each guitar into a WYE into the tuner and then continue to the amp and DI box. Id like a link to download the manual in a pdf format. I have looked at the Korg website but only found manuals for the current product range. The mic can be positioned to get al think it is the power supply. Do you think it is cheaper to repair it or should I just get a new one I need ti charge the unit every other day Answer questions, earn points and help others. Up for sale is this used Korg DTR2 rackmount tuner. The DTR2 is a topnotch unit that reads an input very quickly, andI particularly like how it has BOTH a front panel AND a rear panelFor the manual and the complete specs, go here All LEDs work as well as new. It has theThe price Includes Just the Korg DTR02 itself. TERMS Direct checkout through Reverb.com or mailed payment. The pitchblack Pro features a new 3D visual meter thats so beautiful youll think of it as an aspect of your stage performance. The threedimensional expression of light delivers an unprecedentedly visual element.

Although its in a rackmount form factor, the body is ultralightweight and slim, allowing it to be used anywhere. Its ideal not only on stage but also during rehearsals or recording. The crisp lights in your rack will attest to your professionalism. In addition to the powerfully illuminated color LEDs that provide unparalleled brightness, the special design with treated acryl allows a threedimensional view of the light, from the surface of the source all the way into its depths. This means that from any distance or angle, discrepancies or change in pitch will be instantly obvious. The unit can also be used in a variety of situations other than in a rack; you can simply set it in a desired location, or attach it to a floor monitor. The illuminated LED will move to the right if the string is sharp, or toward the left if the string is flat. This process is intuitively easy to grasp. The meter illumination will flow from left to right if the string is sharp or from right to left if the string is flat. The right side of the LED meter strobes if the string is sharp; the left side strobes if the string is flat. When the pitch is correct, only the center LED will be lit up. This is a convenient way to avoid problems on stage or in the studio. There's also a Mute function that lets you tune without producing sound from the Output jack. Although its in a rack mount form factor, The body is ultralightweight and slim, allowing it to be used anywhere. Now, Korg Unveils its latest pitch black rack mount model. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Chick in San Diego 4.0 out of 5 stars The first is the ruggedness, or lackthereof. The unit is all plastic, and it is a glossy plastic that is very susceptible to fingerprints, scratches, etc.

Shockingly, the rack ears are actually plastic as well and snap on the unit all flimsylike. It is just a matter of time before these will break so you may want to just order a couple replacements sets in advance to be ready on that inevitable day. The Second is just a detail, but if you use it with an external rack master power switch, you still have to manually turn it on each time as it wont automatically turn on when power is switched off and on externally. But the Third, and the motivator of my review, is the buffered output. Unless you can use this in a scenario where you are feeding it from a dedicated Tuner Output from some other unit, or a splitter, etc, you may seriously want to consider a different tuner. When setup inline, inserted in your signal path, the buffered output is really cutrate and just destroys the sound of your guitar rolling highs and totally messing with the dynamics, killing clarity and definition and not just a little. I first tested the unit at low living room volumes and even at low volume it was so noticeable I thought at first that something had changed on my amps settings and kept checking my tone control to make sure it wasnt rolled down or something. After deducing that it was the tuner, I swapped cables, even swapped the unit with the second of the two I bought. Turned out the cause was the PB05 and both units did the same thing. In my case, its all good, as my final intended application can be setup with dedicated TunerOut feeds and I wont be utilizing the output Ill just have to mute a different way. But were it not the case, and if these things didnt look as cool as they do, these would be going back in a heartbeat. Pretty disappointed in KORG on this considering the high quality of sound and construction of their previous rack tuners that have served me well for countless years. But you do gotta dig that 3D blue

tuning display!

Easy to see from anywhere, 3 tuning modes regular, strobe, half strobe, works great on guitar, bass, and I use it to tune the oscillators on my synths so they are in tune with each other. Works well, but it won't read super low notes on synth, so you just need to go up an octave or two and you're good. Great tuner, but do keep in mind that the body, and rack ears, are made of plastic. I use a huge aluminum 43U server rack. It's up near the top so it stays safe and away from my kids. When screwing into a rack, DO NOT overtighten the screws, the plastic ears may crack. I suppose that's probably not an issue for most people, I just like to switch on my Furman power supply and have all my gear plugged into it turn on automatically. Oh well, I can live with that. Korg makes great tuners, I still have a small handheld Korg tuner from like 15 years ago, it still works great, and I don't think I've ever replaced the 9V battery it came with. I just wanted the Pitchblack Pro so I could run an Aux Send from my mixer straight into it permanently on Input 2 on the back and use Input 1 on the front for plugging a guitar or bass in when necessary; that, and it looks really sweet in my studio rack. I like to turn off the lights in my studio, turn the tuner on strobe, and watch the whole room glow blue. I purchased this specific tuner because it has a power output jack. When used to power a pedal, it emits horrible noises through the amp. I isolated the noise and it is definitely the tuner causing the problem. I like the tuner but if your decision hinges on the powering an additional pedal with it, you may want to look elsewhere. So I have to turn on my power conditioner and then turn on tuner and then switch mode to strobe one. Why not use standard C13 power cord like everyone else. This tuner could be carefully racked somewhere in a studio and never touched again, but it doesn't create an impression of professional rock-solid tuner that could survive a tour inside of rack.

And it looks like sh!t, seriously. I'll keep it, but if it breaks I never buy it again. The plastic build feels cheap but the functionality is good. The only thing I wish it had was a way to kill the display so that it only turned on when you needed to tune. Ideally, the MUTE switch would allow you to mute the signal path and turn the display on in one fell swoop. I might try to pull it apart and see if I can engineer something. This pedal was brought before the group of musicians I practice with for tuning my Fender Noir Precision Bass. Aesthetically, it fits with the pedal board and customization of my equipment. Third party opinions on this pedal are that it is very easy to read, use, and the multiple modes of tuning are very useful. Amazing strobe that's perfect for intonation. It handles low tunings Eb on my 8string, over an octave below standard 6string guitar tuning. Like a lot of tuners it has a power out as well as in so I use it with a daisy chain to power a couple other pedals. Under extremely high gain you can hear the pedals display or the circuit that mutes the output but I'd be amazed if any pedal could handle it a RAT into a Russian big muff Sunn 0 anyone. The strobe mode is amazing for intonation ridiculously precise and once you get used to the display you can tune quickly with immense accuracy. The pedal feels very well built, solid, heavy and I plastic display also seems pretty resilient. It even came with a battery in the box, which was a nice surprise. I've tried holding the button down to where it flashes but it doesn't seem to stick for me. Very minor thing though. I'd perhaps give it 4.5 stars if I could. I shall install it within a pedal board anyway so in a way its lightness is a bonus. With three different display settings I will have to see which works out best on stage, I suspect static strobe for me.

Tracking seems pretty good and stable no better than comparable pedal tuners but again the internals are likely to be very similar, it's just that you get a nice big display with the rack unit. It won't be going back so I'll try and update at some point if there are any niggles. Blue LED's light up on the left and right sides when you power it on giving it a really futuristic look. The unit is made of good solid plastic and feels like quality. Very very accurate tuner. Mode one is the middle LED nice and simple. Mode 2 is the strobe which, I feel, is the most accurate of the tuning displays and you could spend hours tuning your instrument. Mode 3 is a mix of single LED and strobe mode. Very bright and extremely easy to see. I have it connected at the back to my Line 6 POD Pro HD MultiFX

so you only need to plug your cable into the front input of the tuner; the output at the back can go right into whatever input you desire. Amazing. Unit now resides in my small portable rack for amptop duties whenever I play. Dont mess about just get one! In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. Tuner Works Great and Looks Great. Original Cord. Owners Manual Included. Can accept PayPal. If so, could you provide some info on the unit, Im not familiar with this tuner. Where are you in Mo. Thoroughly tested, works perfectly. Comes with the power cord. Shipping price is for lower 48 States only, ask me about shipping for Alaska and Hawaii BEFORE you buy the item please, it could be more but it may also be the same price. Global Ebay Shipping is turned on, put the item in your Cart to find out your shipping cost, they charge it not me. All items ship with delivery confirmation and insurance so youre not at any risk. If you find my shipping price high, bear in mind that I am also paying for insurance and delivery confirmation, and that it almost always costs me more to ship than I charge.

All that being said, unless I send you a different item, or the item is incomplete in some way, you are keeping it. No returns unless Ive made a mistake. I dont pay exorbitant Ebay and PayPal fees and then shipping charges for you to try out an item and then return it because you dont like it, you wanted to try it out, or you need to pay the rent. On the other hand I dont sell junk, youre going to want to keep the item. Normal 0 false false false ENUS XNONE XNONE I can not cancel an order after payment is made or you have agreed to buy via Best Offer, speaking of which, payment is due at the time of Best Offer, do not make the offer if you do not have the funds. DO NOT buy this item thinking that you will get a few bucks off when you receive it by implying that I will get negative feedback if I don't relent. You are the light of the world. A polarized plug has two blades with one wider than the other. A g rounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance servicing instructions in the literature accompanying the product.
