

Duracell Battery Charger Instruction Manual

OPERATING INSTRUCTIONS:

*If Flashing Red LED is encountered, first ensure you are attempting to charge a NiMH AA or AAA battery only. If yes, remove and reinsert the NiMH battery. If battery has become heated, it may be damaged. Insert a new NiMH battery.

TO CHARGE BATTERIES

1. Insert DURACELL NiMH batteries into the charging slots. The following types of cells may be charged:
- From two (2) to four (4) AA or AAA cells
2. Plug the charger into an AC outlet.
3. The LED indicator will light up RED.
4. If abnormal conditions are detected during charging, the charger channel will stop charging and the corresponding LED will flash RED.
5. The individual LED indicators will turn GREEN when the batteries become fully charged.
6. Once charging is complete, unplug the charger from the power source and remove the batteries.
7. Charging time may vary based on battery capacity (mAh).
8. Batteries that are new or have been stored for an extended period may need to be charged and used 2-3 times before optimal charge performance is achieved.

NOTES & USAGE TIPS:

1. New non-Pre-Charged batteries may require charging before use.
2. This charger is capable of accepting 100-240 V AC, 50/60 Hz and, therefore, can be used overseas.
3. Batteries will automatically stop charging when full charge is reached. Safety protections will prevent battery from overcharging.

BATTERY LED'S

Condition:	LED:
No battery	Off
Charging	Red
Completed charge	Green
Abnormal Battery	Flashing Red*

Position Chart

To charge either 2 or 4 AA/AAA use the following positions:

Charging Time Table

Cell Capacity	Charging Time
2550 mAh	8 hours
2450 mAh	8 hours
2000 mAh	8 hours
1700 mAh	5 hours
1000 mAh	6 hours
800 mAh	5 hours

Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Duracell Battery Charger Instruction Manual . To get started finding Duracell Battery Charger Instruction Manual , you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

Duracell Battery Charger Instruction Manual

Some Duracell charger models come equipped with a stock car adapter as well as the normal AC wall adapter, but if you've never used a Duracell charger before, it can be a bit confusing. Fortunately, with the right instructions, you can keep those digital gadgets powered without having to constantly buy new batteries. Step 1 Put the Duracell NiMH batteries into each of the charging slots of the charger. Be sure only to use the correct size and type of batteries that the manual specifies for your particular charger. Step 2 Plug the AC cable into an available wall outlet and then into the 12 V jack on top of the charger itself. You can also choose to use the car charger instead, but only use the one that was supplied originally. You will see that the charger indicator light has turned red, meaning that the batteries are being currently charged. Step 3 Watch to see if the red indicator light begins to blink. This means that there is a problem with the batteries taking their charge. It may mean that the batteries are operating abnormally, or that there's an abnormal temperature reading. Either way, the batteries will most likely need to be replaced. If you happen to have a second charger, it may be a good idea to try to charge those batteries in the backup before throwing them out. Wait for the indicator light to turn green, then remove the batteries and AC cable from the wall or car outlet. Your batteries will now be fully charged. References Duracell GoMobileCharger Manual Warnings Batteries that have been sitting for an extended period of time may require two or three charging attempts in order to get optimal results. We specialise in producing a range of technologically advanced batteries and battery chargers to meet the portable power needs of any organisation. The United States Environmental Protection Agency EPA reports that Americans buy close to 3 billion batteries annually. When batteries are improperly disposed of, or incinerated, they release toxic chemicals and heavy metals into the environment. Approximately one in five batteries sold every year is rechargeable. A single set of rechargeable batteries can replace over 100 singleuse batteries, says the EPA. Solid red indicates the unit is charging properly. The light will flash red if the charger detects a problem. If it is flashing red, remove the batteries and reinsert them. If the rechargeable batteries are overly warm, they may be old or damaged Do not attempt to charge them. When the light turns green, the batteries have finished charging. The unit features builtin safety mechanisms to prevent overcharging. They can rupture, causing damage and personal injury. Disassembling them can lead to electrical shock or fire. The included batteries are guaranteed to last 5 years. The charger can be used with any AA or AAA NiMH rechargeable batteries. When the charging is complete, an LED charge status indicator lights up, and the charger will automatically shut off. IMPORTANT If you keep the jumpstarter in storage, the battery will discharge over time. Occasionally clean the exterior of the unit with a damp cloth to remove the accumulated dust and dirt. The AC battery charger supplied with the jumpstarter is designed to regulate the charging process, ensuring that the battery is always fully charged but never overcharged. To ensure safe recharging and maximum battery life, recharge the jumpstarter only with the supplied charger or approved battery chargers. **CAUTION** Due to inherent self-discharge, lead acid batteries must be charged at least every 3 months, especially in a warm environment. Leaving a battery in a discharged state, or not recharging every 3 months, may result in permanent battery damage and poor jumpstarting performance. **CAUTION** Do not attempt to recharge the jumpstarter battery if it is frozen. Supplies up to 2.1 Amps of charging power for your USB devices. 5 12V DC power socket powers 12V DC devices and appliances. **IMPORTANT** For general usage warnings and cautions, please see Section 9 Warnings and Cautions on Page 2 of this manual. Please read these items carefully before using this jumpstarter. **WARNING ELECTRICAL SHOCK HAZARD** The jumpstarting clamps may spark if touched together. We recommend leaving the AC battery charger connected when the jumpstarter is not in use. 1. Disconnect any USB and 12V DC appliances from the DC power outlets. 2. Remove the AC charger from the storage compartment under the unit. 3. Plug the AC battery charger into a standard AC wall outlet. Plug the other end of the charger into the 12V socket of the jumpstarter. The "Red" LED on the charger will light up when battery is charging 4. Recharging time should be approximately 12 hours if the jumpstarter battery is fully discharged. "Green" LED lights up on charger when battery is fully charged. **IMPORTANT** The 12hour charging time for the jumpstarter assumes that there is 120V AC at the AC wall outlet.

If the voltage is less than 120V AC, it may take more than 12 hours to fully recharge the jumpstarter. If, after 12 hours of charging, the Battery Status LED remains red, continue to charge the unit for another 12 hours. The unit will be ready for use even if the Battery Status LED remains red. Remember to recharge the battery every three months to keep the jump starter operational. Note Once fully charged, the charging current automatically reduces to a maintenance charge mode, and the jumpstarter may be left permanently connected to the AC battery charger. 4. Checking the Jumpstarter's Battery Level To check the battery's charge level, press the Fuel Gauge button. The LED lights will illuminate and display the current level of available battery power. When all four lights are lit, this indicates that your Jumpstarter is fully charged. It is recommended to maintain a full charge on the Jumpstarter at all times for optimal jump starting and device charging. **IMPORTANT** Your jumpstarter will perform best when its battery is fully charged. The USB device controls the amount of current supplied. **CAUTION EQUIPMENT DAMAGE** The DC power outlet does not automatically switch off when the internal battery is discharged. Check the battery status periodically to prevent total battery discharge. Note The fewer watts a 12V DC appliance draws, the longer the jump starter will operate before recharging is required. To operate a 12V DC appliance 5. Open the protective cover on the jumpstarter's DC power socket. 6. Plug the 12V DC appliance into the DC power outlet on the front panel of the unit, and turn the 12V DC appliance on if required. 7. Fully recharge the jumpstarter as soon as possible after each use. 8. As the DC power socket is internally wired directly to the jumpstarter's battery, extended operation of a 12V DC appliance may result in excessive battery discharge.

WARNING FIRE HAZARD Never allow jumpstart cables' red and black clamps to touch each other or another common metal conductor. **WARNING FIRE HAZARD** Do not crank the engine for more than 4 seconds. The jumpstart feature is designed for short term operation only. Operating the

jumpstart feature for more than 4 seconds may cause damage to the unit. The battery's positive terminal is usually larger in diameter than the negative terminal. Ask your question here. Provide a clear and comprehensive description of the issue and your question. The more detail you provide for your issue and question, the easier it will be for other Duracell JumpStarter 750 owners to properly answer your question. Duracell rechargeable batteries either at home or while you're on the go. With four different
Duracell compact portable chargers to choose from, you can charge your AA and AAA rechargeable
batteries anytime, anywhere. Mini Charger Overview The Mini Charger can charge two AA or AAA
rechargeable batteries at a time, and is available in multiple colors. Recharges two AA or AAA
batteries The Mini Charger can charge two AA or AAA rechargeable batteries at once. It safely

switches to a trickle charge when batteries are fully charged to prevent from overcharging. Simple to use The Mini Charger's foldable wall plug makes for easy usage and portability. Simply insert batteries into slots and plug into a power outlet to recharge.

Available in multiple colors Recharge your batteries with style—get a Mini Charger in one of several colors, including black, blue, green and pink. Compact design This small charger from Duracell is ideal for travel. It's convenient to bring with you in your pocket, bag or purse. The Mini Charger works with Duracell Rechargeable and StayCharged Rechargeable batteries, as well as other brands' rechargeable AA or AAA batteries. Duracell Rechargeable batteries Get hundreds of uses out of each Duracell Rechargeable battery. These powerful NiMH batteries are ideally suited for highdrain or frequently used devices. Duracell StayCharged Rechargeable batteries StayCharged Rechargeables from Duracell stay charged longer, so you can recharge less when not in use. They hold their charge for up to a year—that's up to five times longer than ordinary rechargeable batteries. Ideally suited for highdrain or frequently used devices, StayCharged Rechargeables can be used hundreds of times. Do not attempt to charge nonrechargeable batteries. Misuse could cause batteries to rupture, causing personal injury or damage. Indoor use only. Dry location use only. Risk of electric shock. Never disassemble or alter any part of the charger or batteries. Charger or batteries may become hot during charging and will cool down when charging is complete. Not recommended for use by children. If yes, remove and reinsert the NiMH battery. If battery has become heated, it may be damaged. Insert a new NiMH battery. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. jake 4.0 out of 5 stars It has a great built, not flimsy at all and unlikely to break.Also make sure not to unplug it while charging because it will reset the time and mess up the charging.

If your impatient you might want another charger.I use the batteries for my toothbrush so I use the charger once a week. I also discovered it will charge nicads though instructions tell you not to do that. I just plug this in the wall and in less than hour the red light turns green and I have charged batteries. Might take longer if completely drained, it is a trickle charge after all. It only does 2 at a time and comes with 2 NiHm batteries.These things come in handy. Put it up and forgot about it until a snow storm hit and we lost power. Pulled this out of the utility drawer and didnt expect much since I hadnt charged the batteries. SURPRISE!!! The batteries, after months without being plugged in, had a FULL CHARGE. The charge was strong enough to power up two dead androids to FULL and a 3rd android to half.I would advise having more than one set of rechargeable batteries around for this reason. If you have one set in use and one charging, the slowness of the charging wont be a problem. This product would get 5 stars if it were a quicker charger.It folds up small and fits nicely in my luggage without snagging on anything.I like Duracell and the item but i didnt like the price after seeing on the local stores. OK Charger BAD SELLER BAD PRICEGreat product, I was kinda skeptical because of people saying it was bulky, but for the money I said why not. Its not bulky at all, very compact in my opinion, each battery is charged individually. I bought this in looking for some batteries for an xbox 360 controller for cheap. They work fantastic. Doesnt take too long to charge. I charged them fully about a week ago and they still have 3 out of 4 bars on my xbox controller. I play xbox every day so that says something. For the money you wont beat this, and I highly recommend. This guarantee does not apply to damage from misuse or abuse beyond normal usage. This guarantee gives you specific legal rights, and you may also have other rights which vary from state to state.

Should any battery be damaged by this charger due to defects in the charger arising from faulty materials or workmanship, DURACELL will repair or replace at our option the battery, provided both charger and battery usage instructions have been followed. Send charger with the battery to

DURACELL, Berkshire Corporate Park, Bethel, CT U.S.A 06801 Attention Consumer Relations Department. If yes, remove and reinsert the NiMH batteries. If batteries become heated, they may be damaged. Insert new NiMH batteries. TO CHARGE BATTERIES 1. Insert DURACELL NiMH batteries into the charging slots. Alternatively, plug in a car adapter 12V CL. Use only the stock adapter provided by DURACELL. 4. The LED indicator will light up RED. 5. If abnormal conditions are detected during charging, the charger channel will stop charging and corresponding LED will flash red. 6. The individual LED indicators will turn GREEN when the batteries become fully charged. 7. Once charging is complete, unplug the charger from the power source and remove the batteries. 8. Charging time may vary based on battery capacity mAh. 9. Batteries that are new or have been stored for an extended period of time may need to be charged and used 23 times before optimal charge performance is achieved. Safety protections will prevent battery from overcharging. Used rechargeable batteries may be recycled at no cost to the consumer through the retail collection sites maintained by the Rechargeable Battery Recycling Corporation www.rbrcc.org If you would like additional information on Duracell Rechargeable Batteries call 18005512355 900AM500PM E.S.T.. CAUTION We recommend charging DURACELL NiMH rechargeable batteries only. Do not attempt to charge nonrechargeable batteries. Not recommended for use by children. Do not expose to rain or snow. 8. Do not place in or near water or extreme heat. 9. Do not operate charger with damaged cord or plug. 10. Do not operate charger if it has been severely damaged in any way. 11.

Do not disassemble charger. 12. Disassembly may result in a risk of electric shock or fire. 13. To reduce the risk of electric shock, unplug the charger from the outlet when not in use. 14. This appliance is not intended for use by persons including children with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance. 15. For connection to a supply not in the U.S.A, use an attachment plug adapter of the proper configuration. 16.
