This process of opening a port is frequently called a port forward, since you are forwarding a port from the internet to your home network. That's why we created Network Utilities. Our software does everything that you need to forward a port. This ensures that your ports will remain open even after your device reboots. Your router has a web interface, so you will login to it using your web browser. This can be either Chrome, Firefox, Internet Explorer, or Edge. It usually does not matter which browser you choose to use. It should look something like this. Your router's IP address can also be referred to as your computer's default gateway. <http://adler-hudozhka.ru/pic/dektec-streamxpert-manual.xml>

If all goes well you will see the following screen. Here's how you do it. Starting from the first page in your router. In this new menu, click NAT. In this new menu, click Virtual Servers. It doesn't really matter what you put into this box, but something that will remind you why these ports are being forwarded would be a good idea. It's possible for this to be either the IP address of your computer or any other IP address on your network that you want ports forwarded to. If you are forwarding a range of ports then you need to enter the lowest number of the range into the External Port Start and Internal Port Start boxes and the highest number of the range into the External Port End and Internal Port End boxes. It is time to test them. Our Open Port Check tool is the only online port checking tool with Guaranteed Results. The device also comes with state of the art features that includes Wireless Access Point, usb port, supports standard Internet protocols and plus it comes with easy installation and maintenance.
