Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# Dymo Labelwriter 320 Manual

After just a short time, you will realize how many of your daily tasks will be simplified by using the label printer. With a little imagination, you will think of hundreds of ways to use the label printer to make your job easier and more efficient. This User Guide provides instructions for DYMO When labels are used for shortterm applications envelopes, packages, and so on, fading is not a problem. When labels are used to label files in a file cabinet, fading is very gradual over many years. Labels applied to the edge of a notebook that is then placed on a shelf in the sun will show signs of fading within a few months. To prolong label life when not in use, keep the labels stored in a cool, dry place and inTo choose a label file 1 Select the arrow next to the Label Files dropdown list. A list of the most recently used label files appears. Click here to display the list of recently used labels. If necessary, click More to access all the predesigned labels. Notice that all label files are listed with the label type first, then any important objects on the label, and finally the The Graphic Settings dialog box appears. 2 Select File under Select Graphics Source. The Insert Image button changes to read Select File. 3 Click Select File. The File open dialog box appears listing the contents of the default Clipart folder. 4 Select the Miscellaneous folder and click Open. The contents of the Miscellaneous folder appear. 5 Select Comput1.bmp from the Miscellaneous folder. A previTo enter a return address 1 Click the text in the label's upperright corner. The flashing cursor appears where the default text had been. Flashing cursor 2 Enter the following text COMPUTEK EUROPE B.V. Max Euwelaan 104 3046 MA ROTTERDAM The Netherlands 3 Click anywhere outside the text object. The new return address appears on the label.<http://www.sprinter24.ru/userfiles/developer-manual-template.xml>

Changing the Recipient Address Next, you enter a recipient's addressElsbeth Meijjer Airportplein 7 NL3045 AP ROTTERDAM The Netherlands Elsbeth Meijjer's address now appears as the recipient's address on the label. Changing the Font You may want to modify the font used for the recipient address or return address. To change the font 1 Click the recipient address object. The address text is highlighted. 2 Select Times New Roman from the Font dropdown list. 3 Select from the Formatting toolbar. The recipient addreSaved labels will automatically appear in the Label Files dropdown list. To save the label 1 Click on the Main toolbar. The Save File dialog box appears. 2 Enter MyShip as the new name for the file and click Save. Notice that your new label file, MyShip, is added to the top of the Label Files dropdown list as the most recently used label and also alphabetically in the list oYou can also modify any of the predesigned label files included with the software. The Designer allows you to change the appearance and content of labels. You can add or modify text including addresses, barcodes, sequential numbers, datetime stamps, lines, rectangles, and circles or ellipses Macintosh. The following figures are examples ofAddress objects can also display POSTNET barcodes. You can change the font settings font, size, style, and so on for text in address objects and control the text's position. You can also apply special effects to the text. Address objects are by default variable text objects. Address objects can also be fixeSee the online Help for more information about the barcode symbologies supported. Counter The counter object

automatically. The Open File dialog box appears. 2 Select the file you wish to open and click Open. The label opens in the label workspace. Adding an Object When you place a new object on a label, the new object displays certain default settings. For example, new address and text objects display text describing how to modify the objects. <http://www.profikaneten.hu/kepek/developer-manual-sample.xml>

Although the various types of objects are different, the steps for placing the objects on a label are nearly the same. Additionally, if you have Mac OS version 10.2 or later, you can print labels using the addresses already stored in your Mac OS address book. You can also use the builtin Address Book to store information other than addresses. This information for example, a list of product numbers or video titles can be linked to a variable text. You can display or hide the panel using the Address Book button on the Action bar. To display the Address Book Click or select Open from the Address Book menu. The last list file that was opened appears in the Address Book panel of the Main window. The first time you open the Address Book, the Sample List entries appear. Notice the currently selected list entry is a. Be sure to check that it is the user manual to exactly the device that you are looking for. We have 10 Dymo LabelWriter 450 Turbo manuals available for free PDF download Quick Start Manual, Getting Started, User Manual, Technical Reference Manual, Setup Manual. Please check your inbox, and if you can't find it, check your spam folder to make sure it didnt end up there. Please also check your spam folder. All other trademarks are the property of their respective holders. After just a short time, you will realize how many of your daily tasks will be simplified by using the label printer. With a little imagination, you will think of hundreds of ways to use the label printer to make your job easier and more efficient. The software now contains two editors Label Editor and Tape Editor. The Label Editor is much the same as previous versions of the software, allowing you to design and print DYMO diecut labels.

The Tape Editor is only available if you have a DYMO tape printer installed on your computer, such

as the DYMO LabelWriter Duo. For instructions on using the Tape Editor, see Chapter 7, Using the Tape Editor on page 27. This means you will never have to replace toner, ink cartridges, or a ribbon to print labels. The thermal print head contains a row of miniature heating elements that press against the treated label. As a heating element touches the specially treated label, a thermal reaction causes the specific point on the label to turn black. We recommend you only use DYMObrand labels. Using labels other than DYMObrand labels may void your warranty. Thermal labels are susceptible to fading in two ways. When labels are used for short-term applications envelopes, packages, and so on, fading is not a problem. Labels applied to the edge of a notebook that is then placed on a shelf in the sun will show signs of fading within a few months. Follow the instructions in the Quick Start Guide to install your printer and DYMO Label Software. However, the first time Windows users start DYMO Label Software, you will be asked to register. If you choose not to register the software at this time, you will be prompted the next several times you start the program. If you register over the Internet, wait a few seconds while your information is sent to DYMO. DYMO Label Software includes extensive online Help. At times in this manual you will be directed to the online Help for more detail or instructions on various topics. The program includes The best way to start is to learn how to modify one of the predesigned labels included with the software. In this tutorial, you will customize a shipping label with a graphic. If you have a LabelWriter 300 printer, select this shipping label and follow the tutorial anyway. This tutorial will give you valuable information on how to access the various text and design objects, and change their attributes.

A list of the most recently used label files appears. Notice that all label files are listed with the label type first, then any important objects on the label, and finally the part number of the label. As you will see in this step, each piece of information on a label is an object for example, the return address, the recipient address, the line, and so on. When you doubleclick an object, a Settings dialog box appears where you can change the object's attributes. The Graphic Settings dialog box appears. The contents of the Miscellaneous folder appear. The flashing cursor appears where the default text had been. The address text is highlighted. If you have a LabelWriter 300, review this section even though you will not be able to actually print the label. If necessary, see the Quick Start Guide for information on how to set up your printer and load the labels. Saved labels will automatically appear in the Label Files dropdown list. The Save File dialog box appears. A default Label Files folder is created for you when the software is installed. For Windows, the folder is located in C:\Documents and Settings\All Users\Documents\DYMO Label\Label Files. For Macintosh, the folder is located in the DYMO Label folder where you installed the application. You can also modify any of the predesigned label files included with the software. You can add or modify text including addresses, barcodes, sequential numbers, datetime stamps, lines, rectangles, and circles or ellipses. Macintosh. The following figures are examples of custom label designs. Each object You can select the attributes that you For more information on modifying object attributes, see This is useful Address objects can also display POSTNET barcodes. You can also apply special effects to the text. Address objects can also be fixed text objects. Address text is saved as part of the label in fixed text objects.

You can import many popular graphic formats, position them anywhere on the label, resize them, and even specify one as the default graphic. You can also copy a graphic from a graphics application such as Microsoft Paint or CorelDRAW, and then paste it onto a label. You can import a graphic directly from a file or Windows only capture an image from a video device connected to your computer. See the online Help for information about defining a default logo file. Horizontal lines also function well as visual dividers on labels for example, between the sender and recipient's address on shipping labels. You can specify the thickness of the lines, and you can also hide lines that appear on labels. A rectangle can be used to create a border around other objects. You can specify shades of gray to fill the rectangle. You can also specify the thickness of the rectangle border. An ellipse can

be used to create a border around other objects. You can specify shades of gray to fill the ellipse. You can also specify the thickness of the border. You can use a barcode object to display fixed information that you enter or variable information obtained from another object. When you link a barcode object to another object, the barcode object encodes the information contained in the linked object. Furthermore, if you change the information in the linked object, the barcode object automatically encodes the new information. When you update the part number in the linked text object, the barcode object is automatically updated as well. See the online Help for more information about the barcode symbologies supported. For example, you could use a counter object to automatically serialize a bunch of raffle tickets. You can also specify the font settings for the counter information, as well as other attributes. As with counter objects, you can specify the text you want to appear in front of and behind the datetime for example, "Today's date is".

You can choose from a variety of date formats, including European formats. You can include or exclude the time and use the 24hour time format 1300, 2200, and so on. You can control the font settings and other attributes for the datetime information. This object can be used for placing text around the perimeter of a round CD label or for simply adding text in an arc on any label. You can choose to display the text as a full circle or as a semicircle along the top or bottom of the label. You can also choose to mirror the text. As with the text object, the curved text object can be used as a variable text object and you can control the font settings and object position. When you create a new label, you select one of these blank labels as a starting point. The blank label opens in the label workspace and the Designer toolbar appears. You can then print the label as is, or modify it to suit your needs. For convenience, the most recently saved label files appear at the top of the Label Files dropdown list.
